COMPLETE PROGRAM OVERVIEW

How the methods connect; follow the separate diagrams for each method

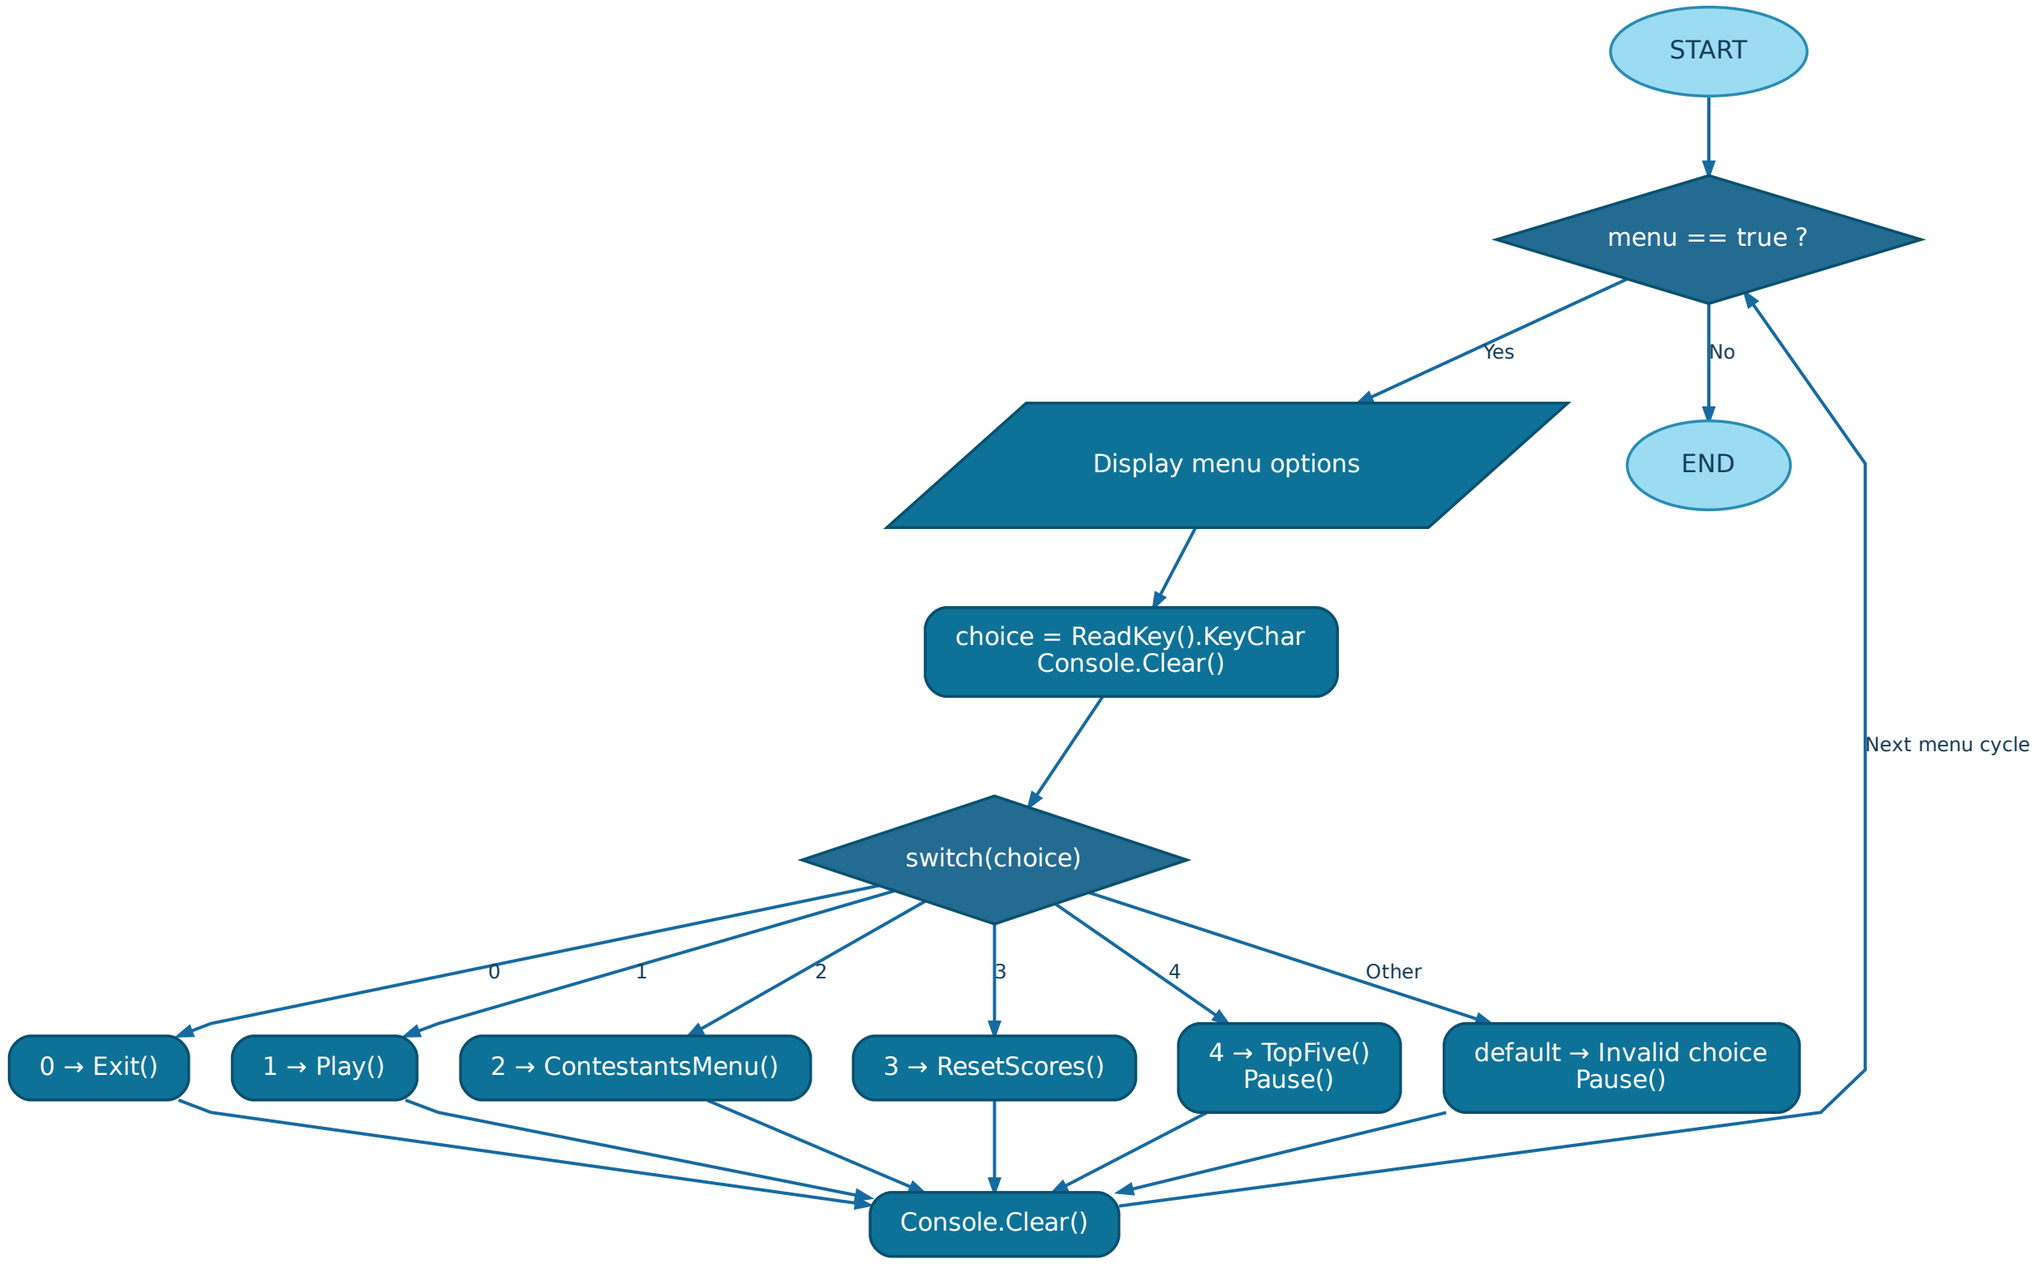

Main()

Start the program, load data, sort, then open the menu

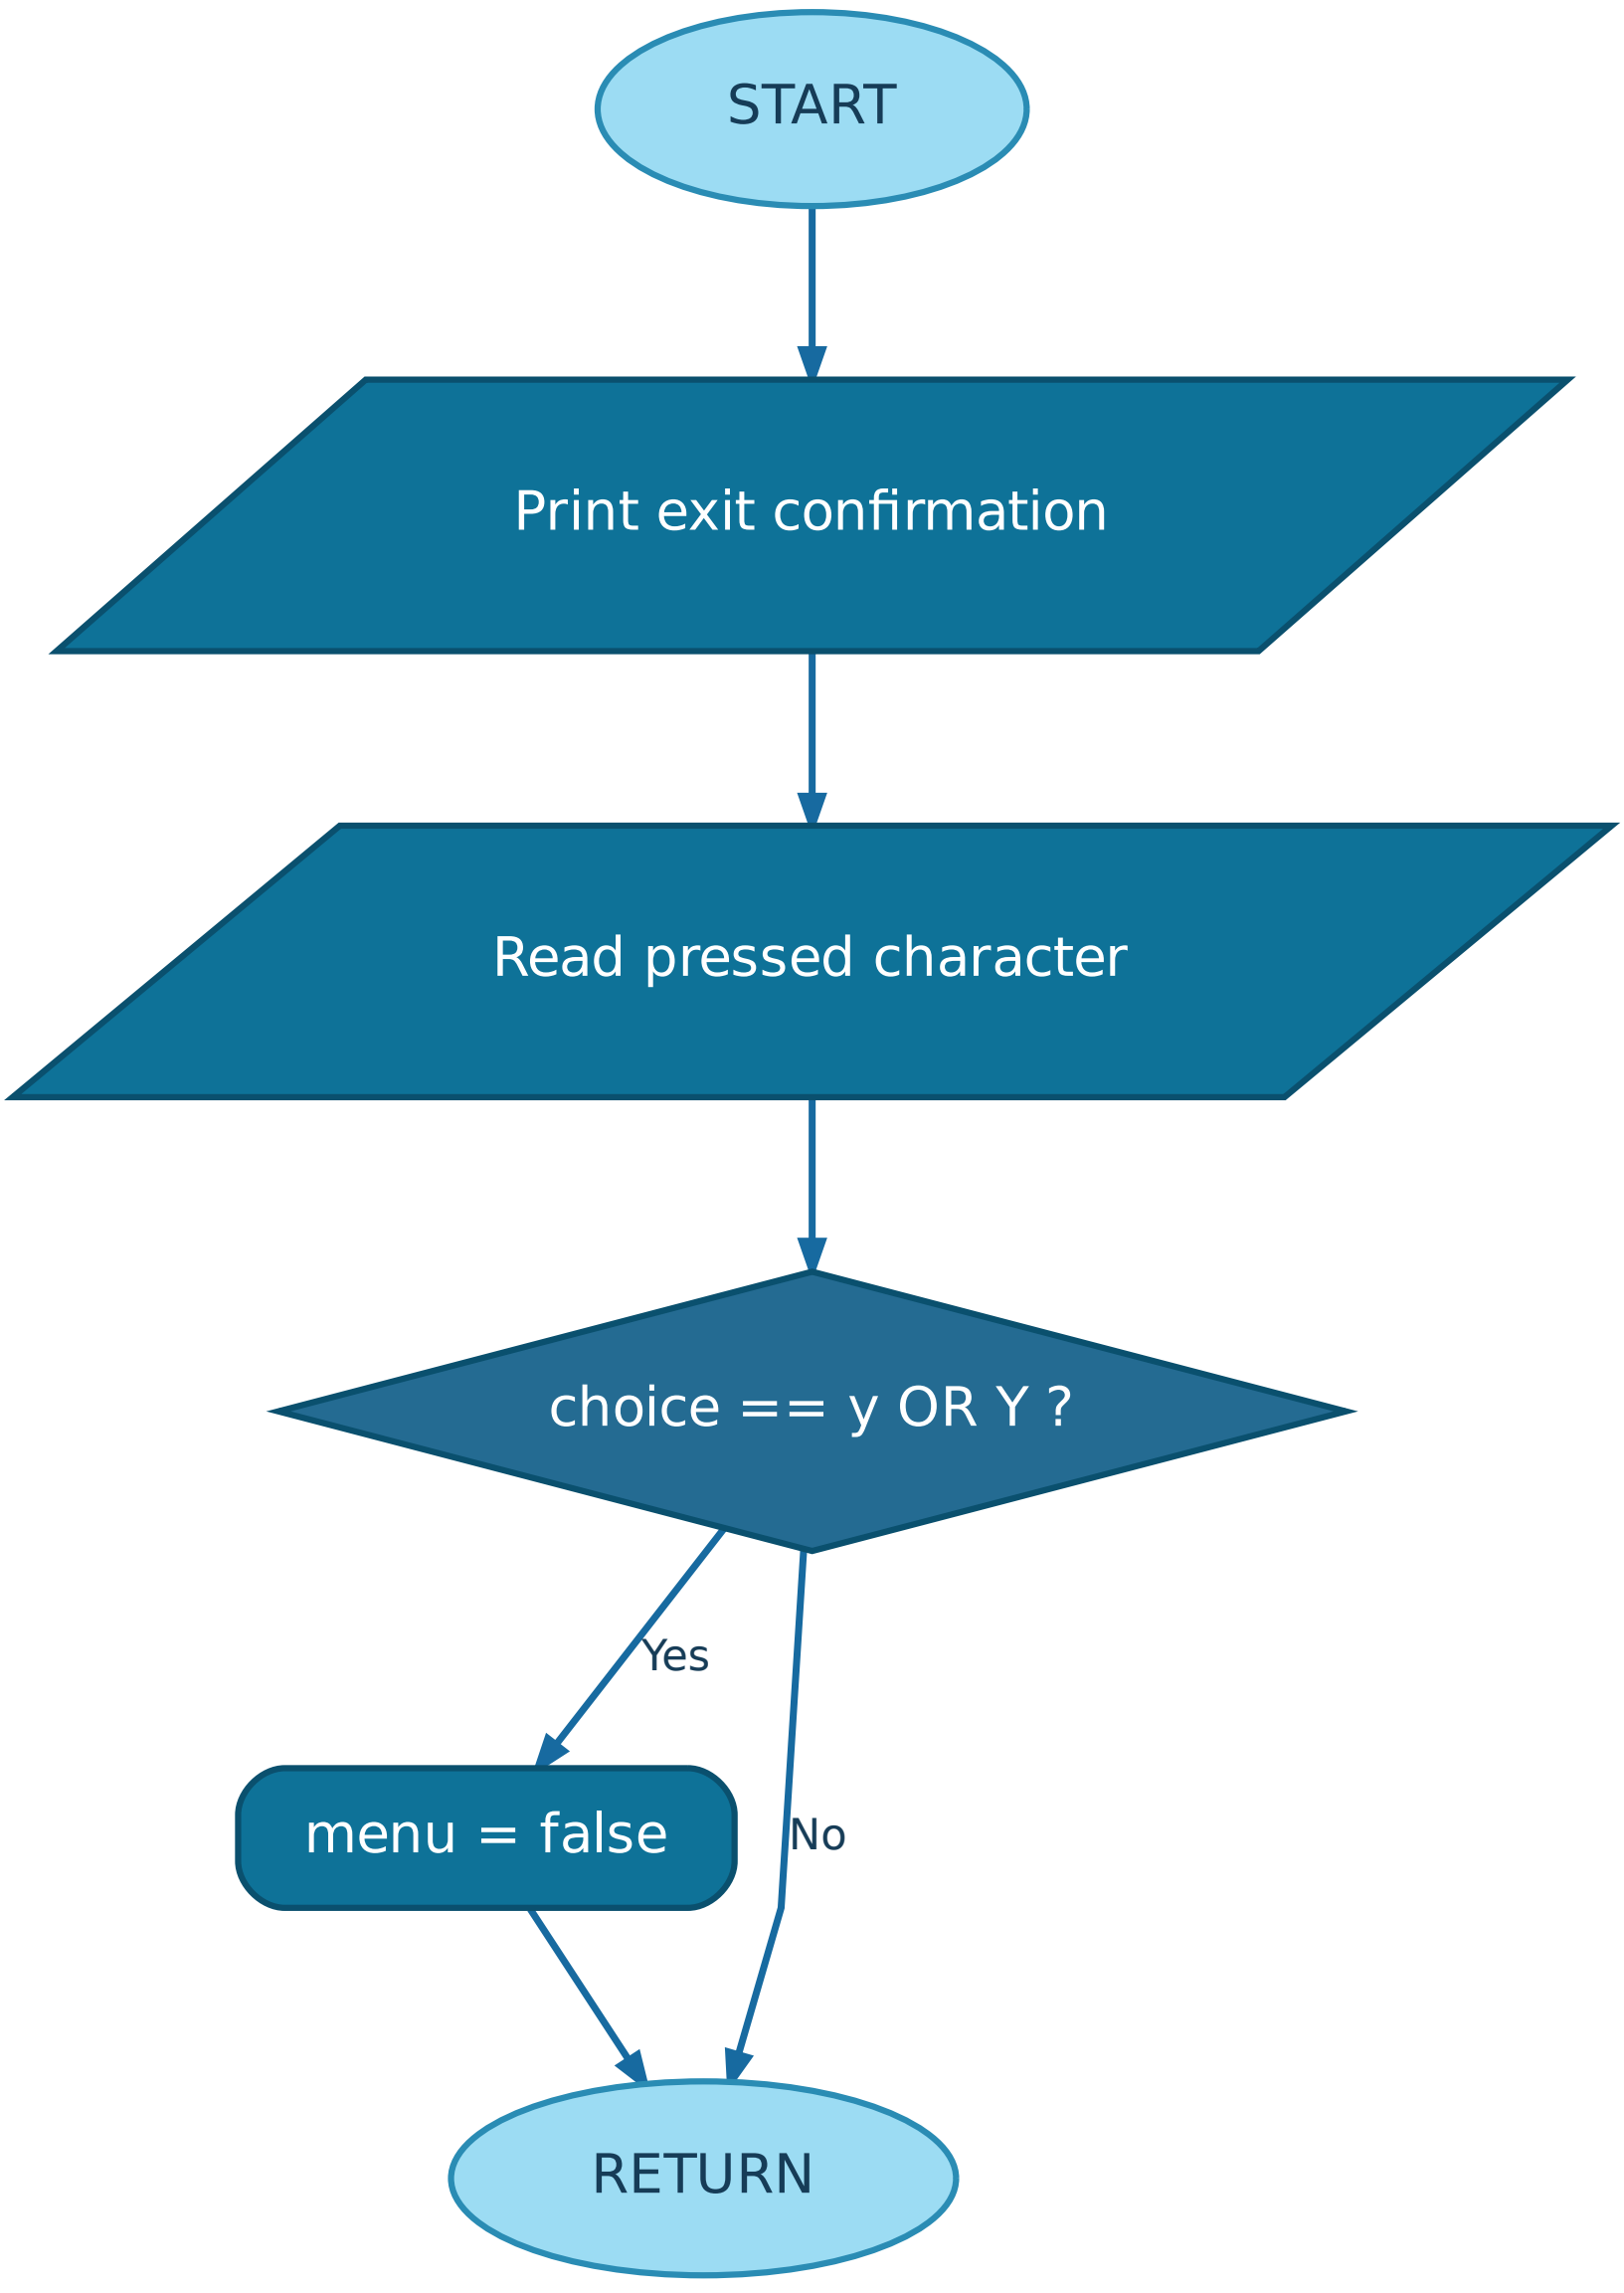

Menu()

Required activity diagram · the main menu uses a while loop and switch

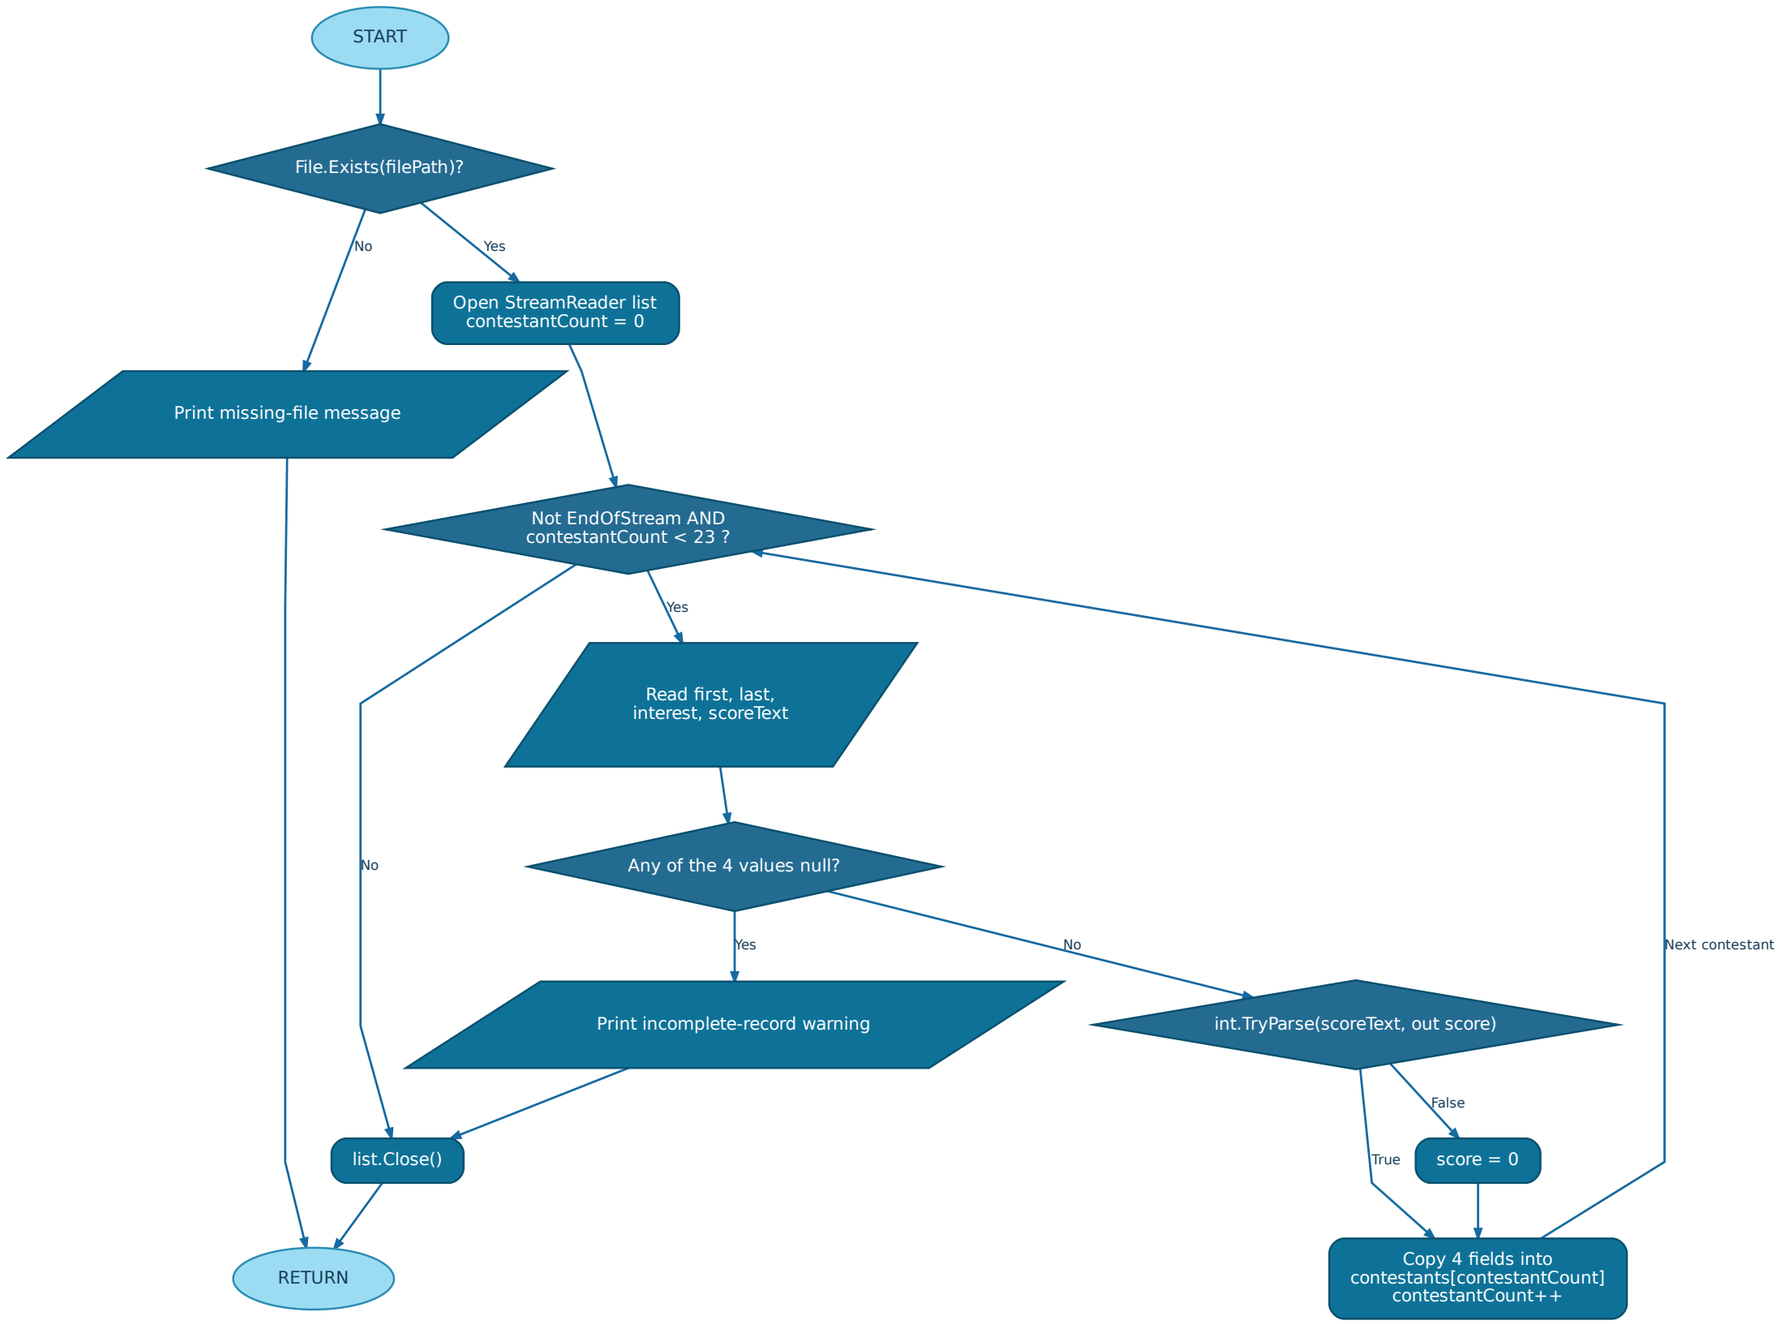

Exit()

Leave the menu only if the user confirms

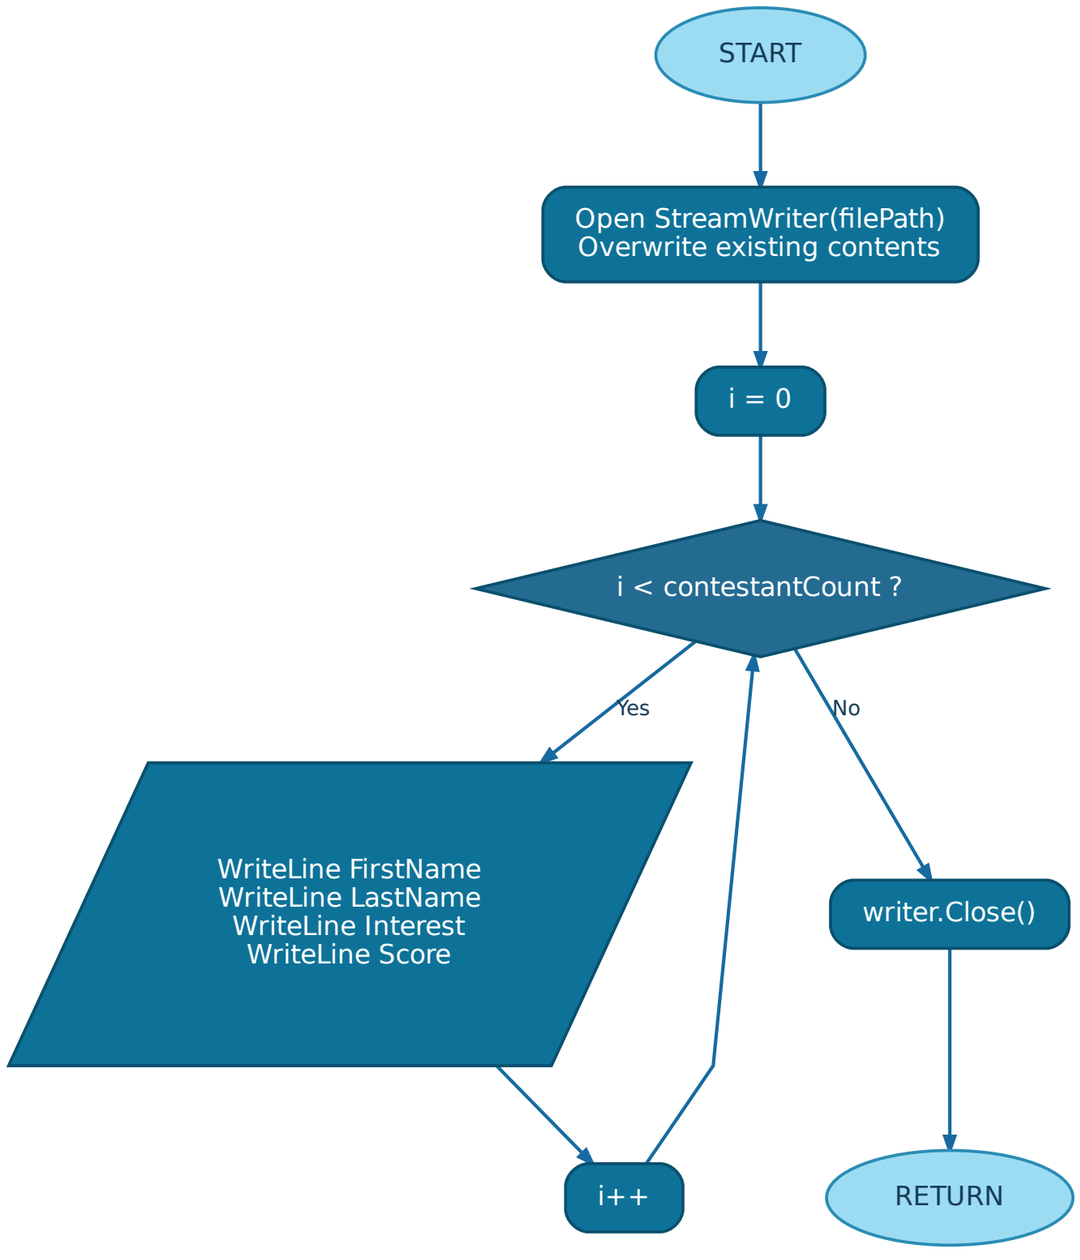

reader()

Read 4 lines per contestant, up to the 23 array positions

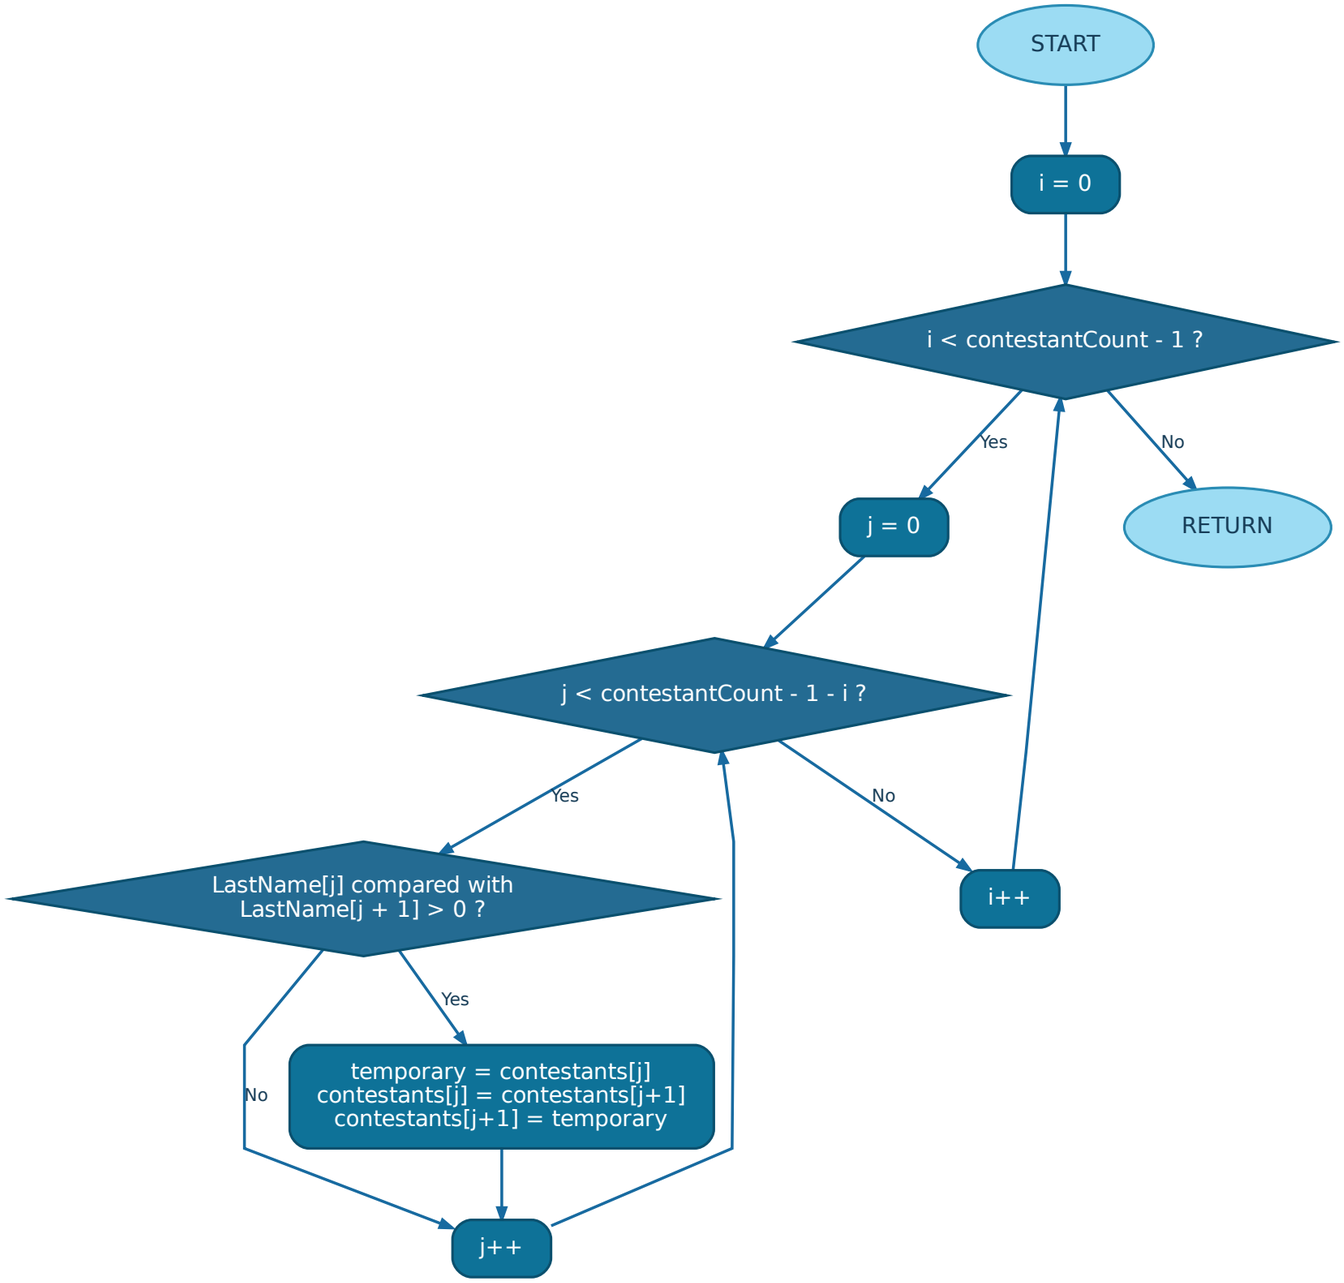

SaveContestants()

Write every loaded contestant back as four text-file lines

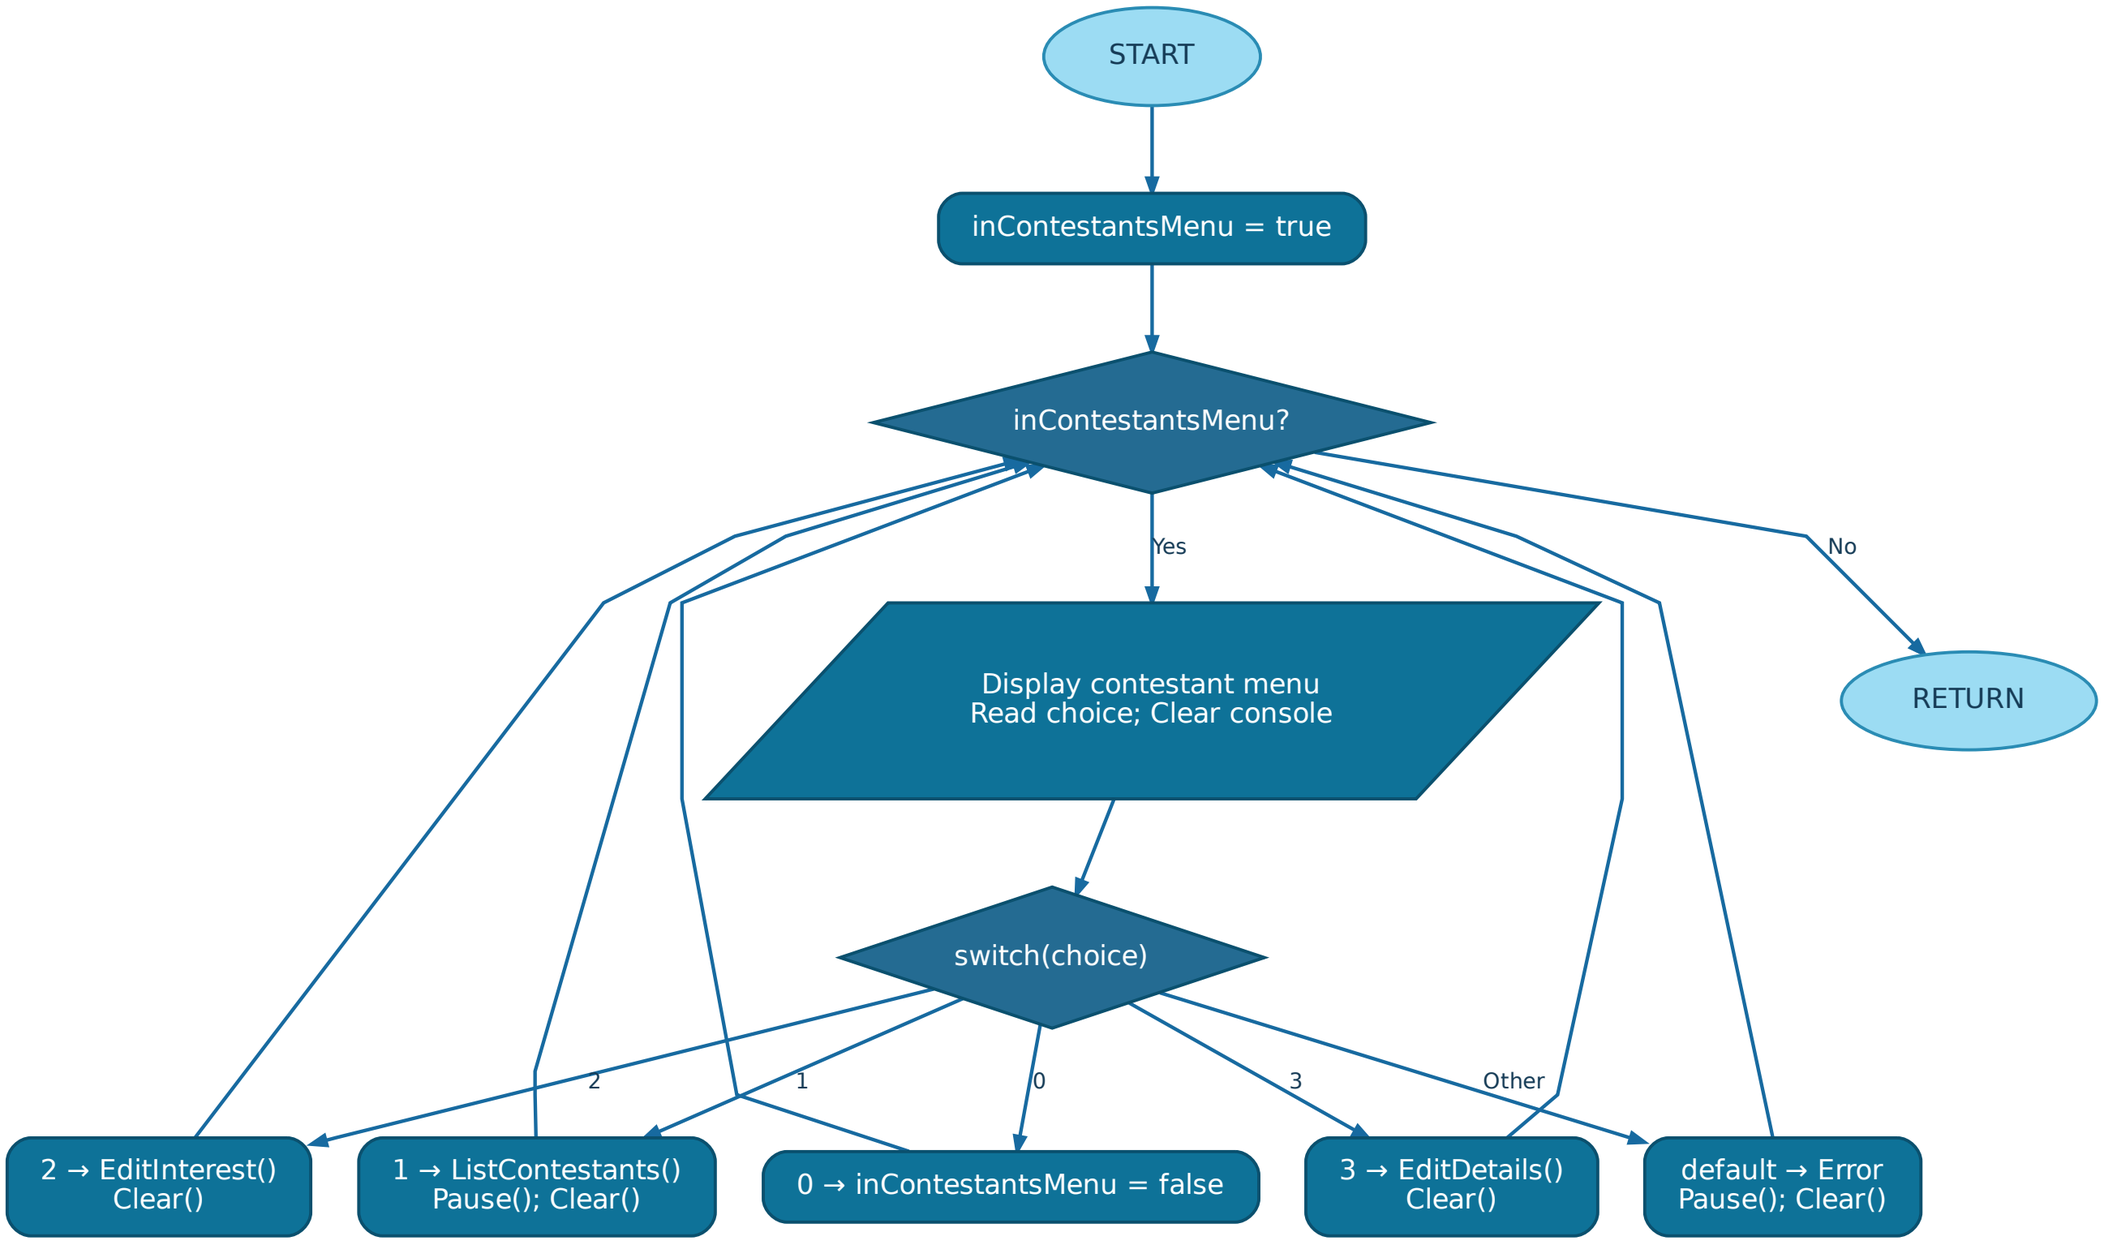

SortContestantsByLastName()

Bubble sort: compare adjacent surnames, swap entire structs

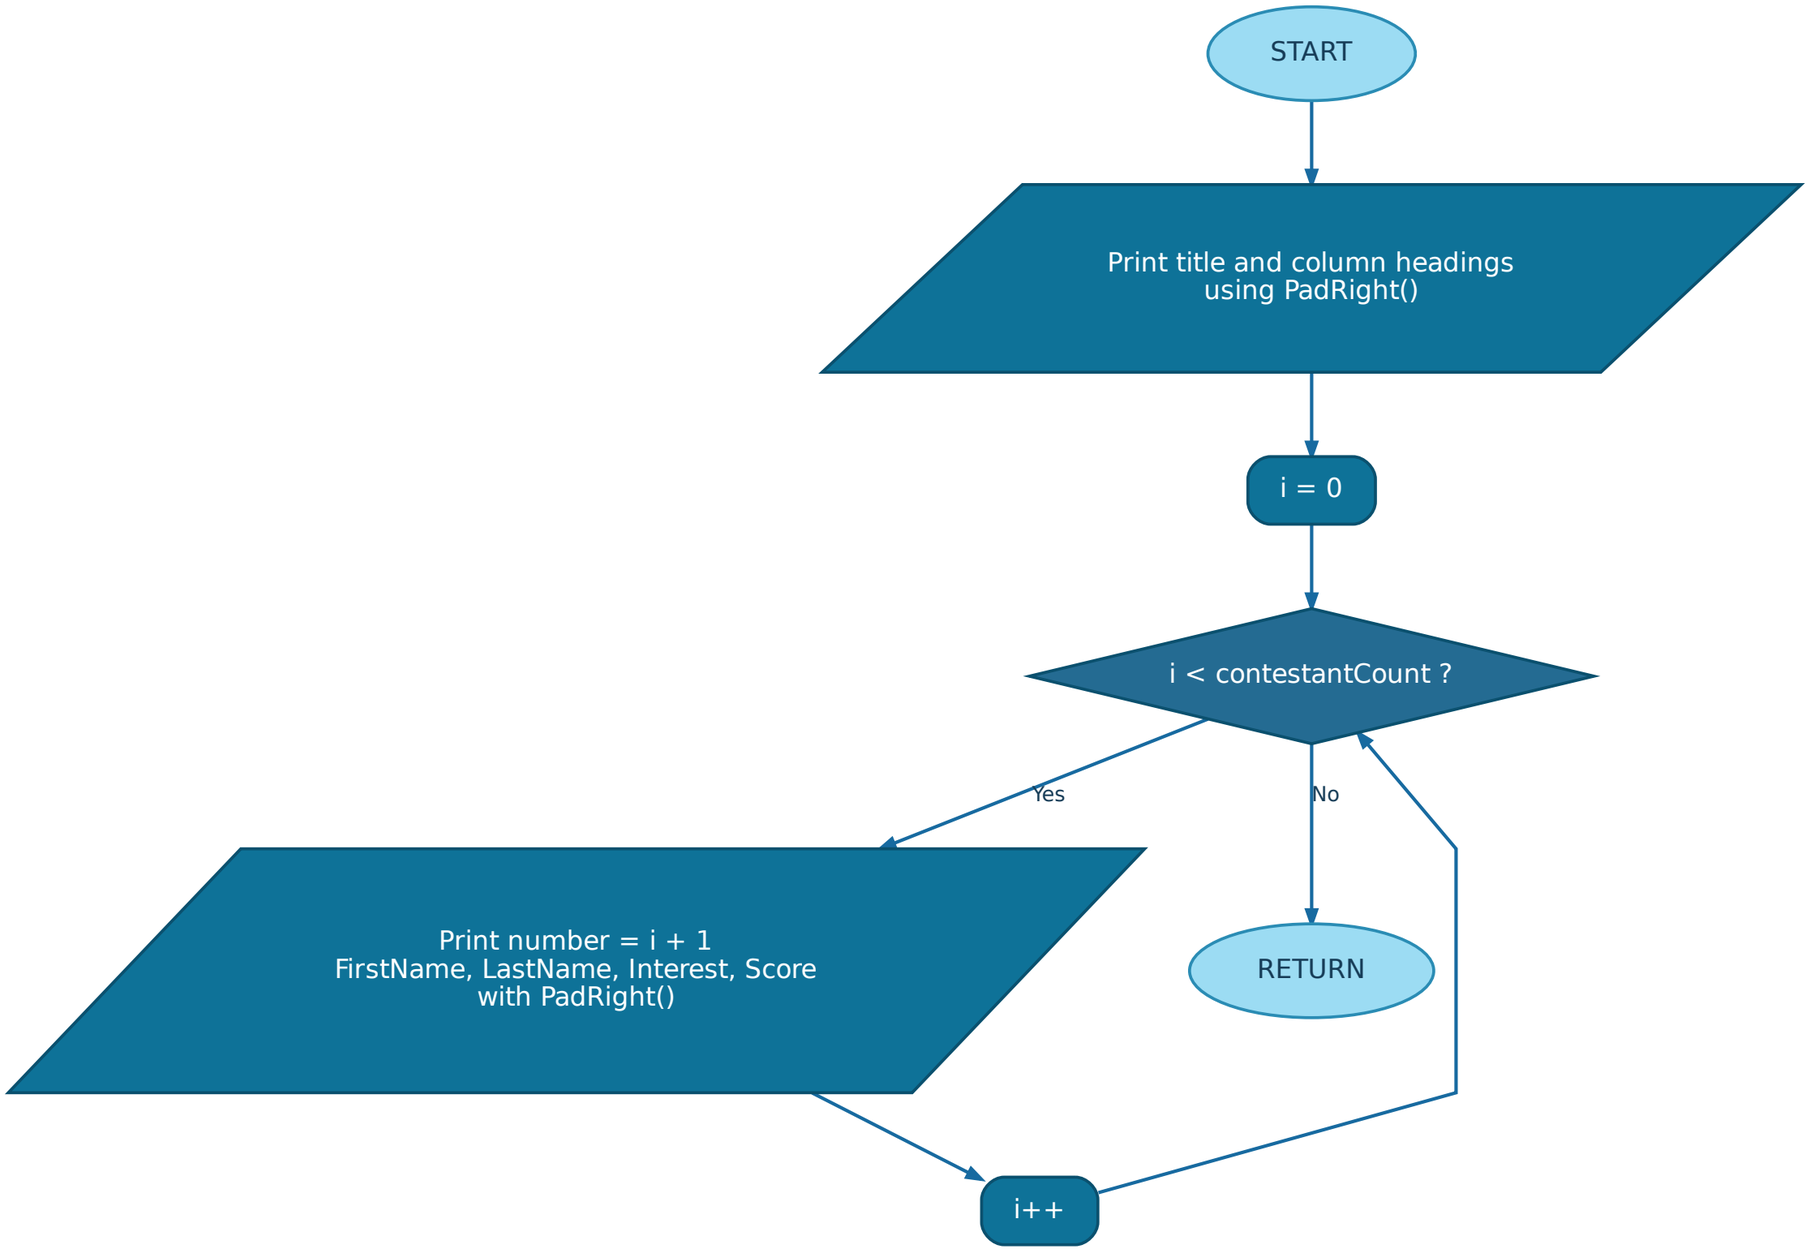

ContestantsMenu()

Repeat the contestant submenu until Back is selected

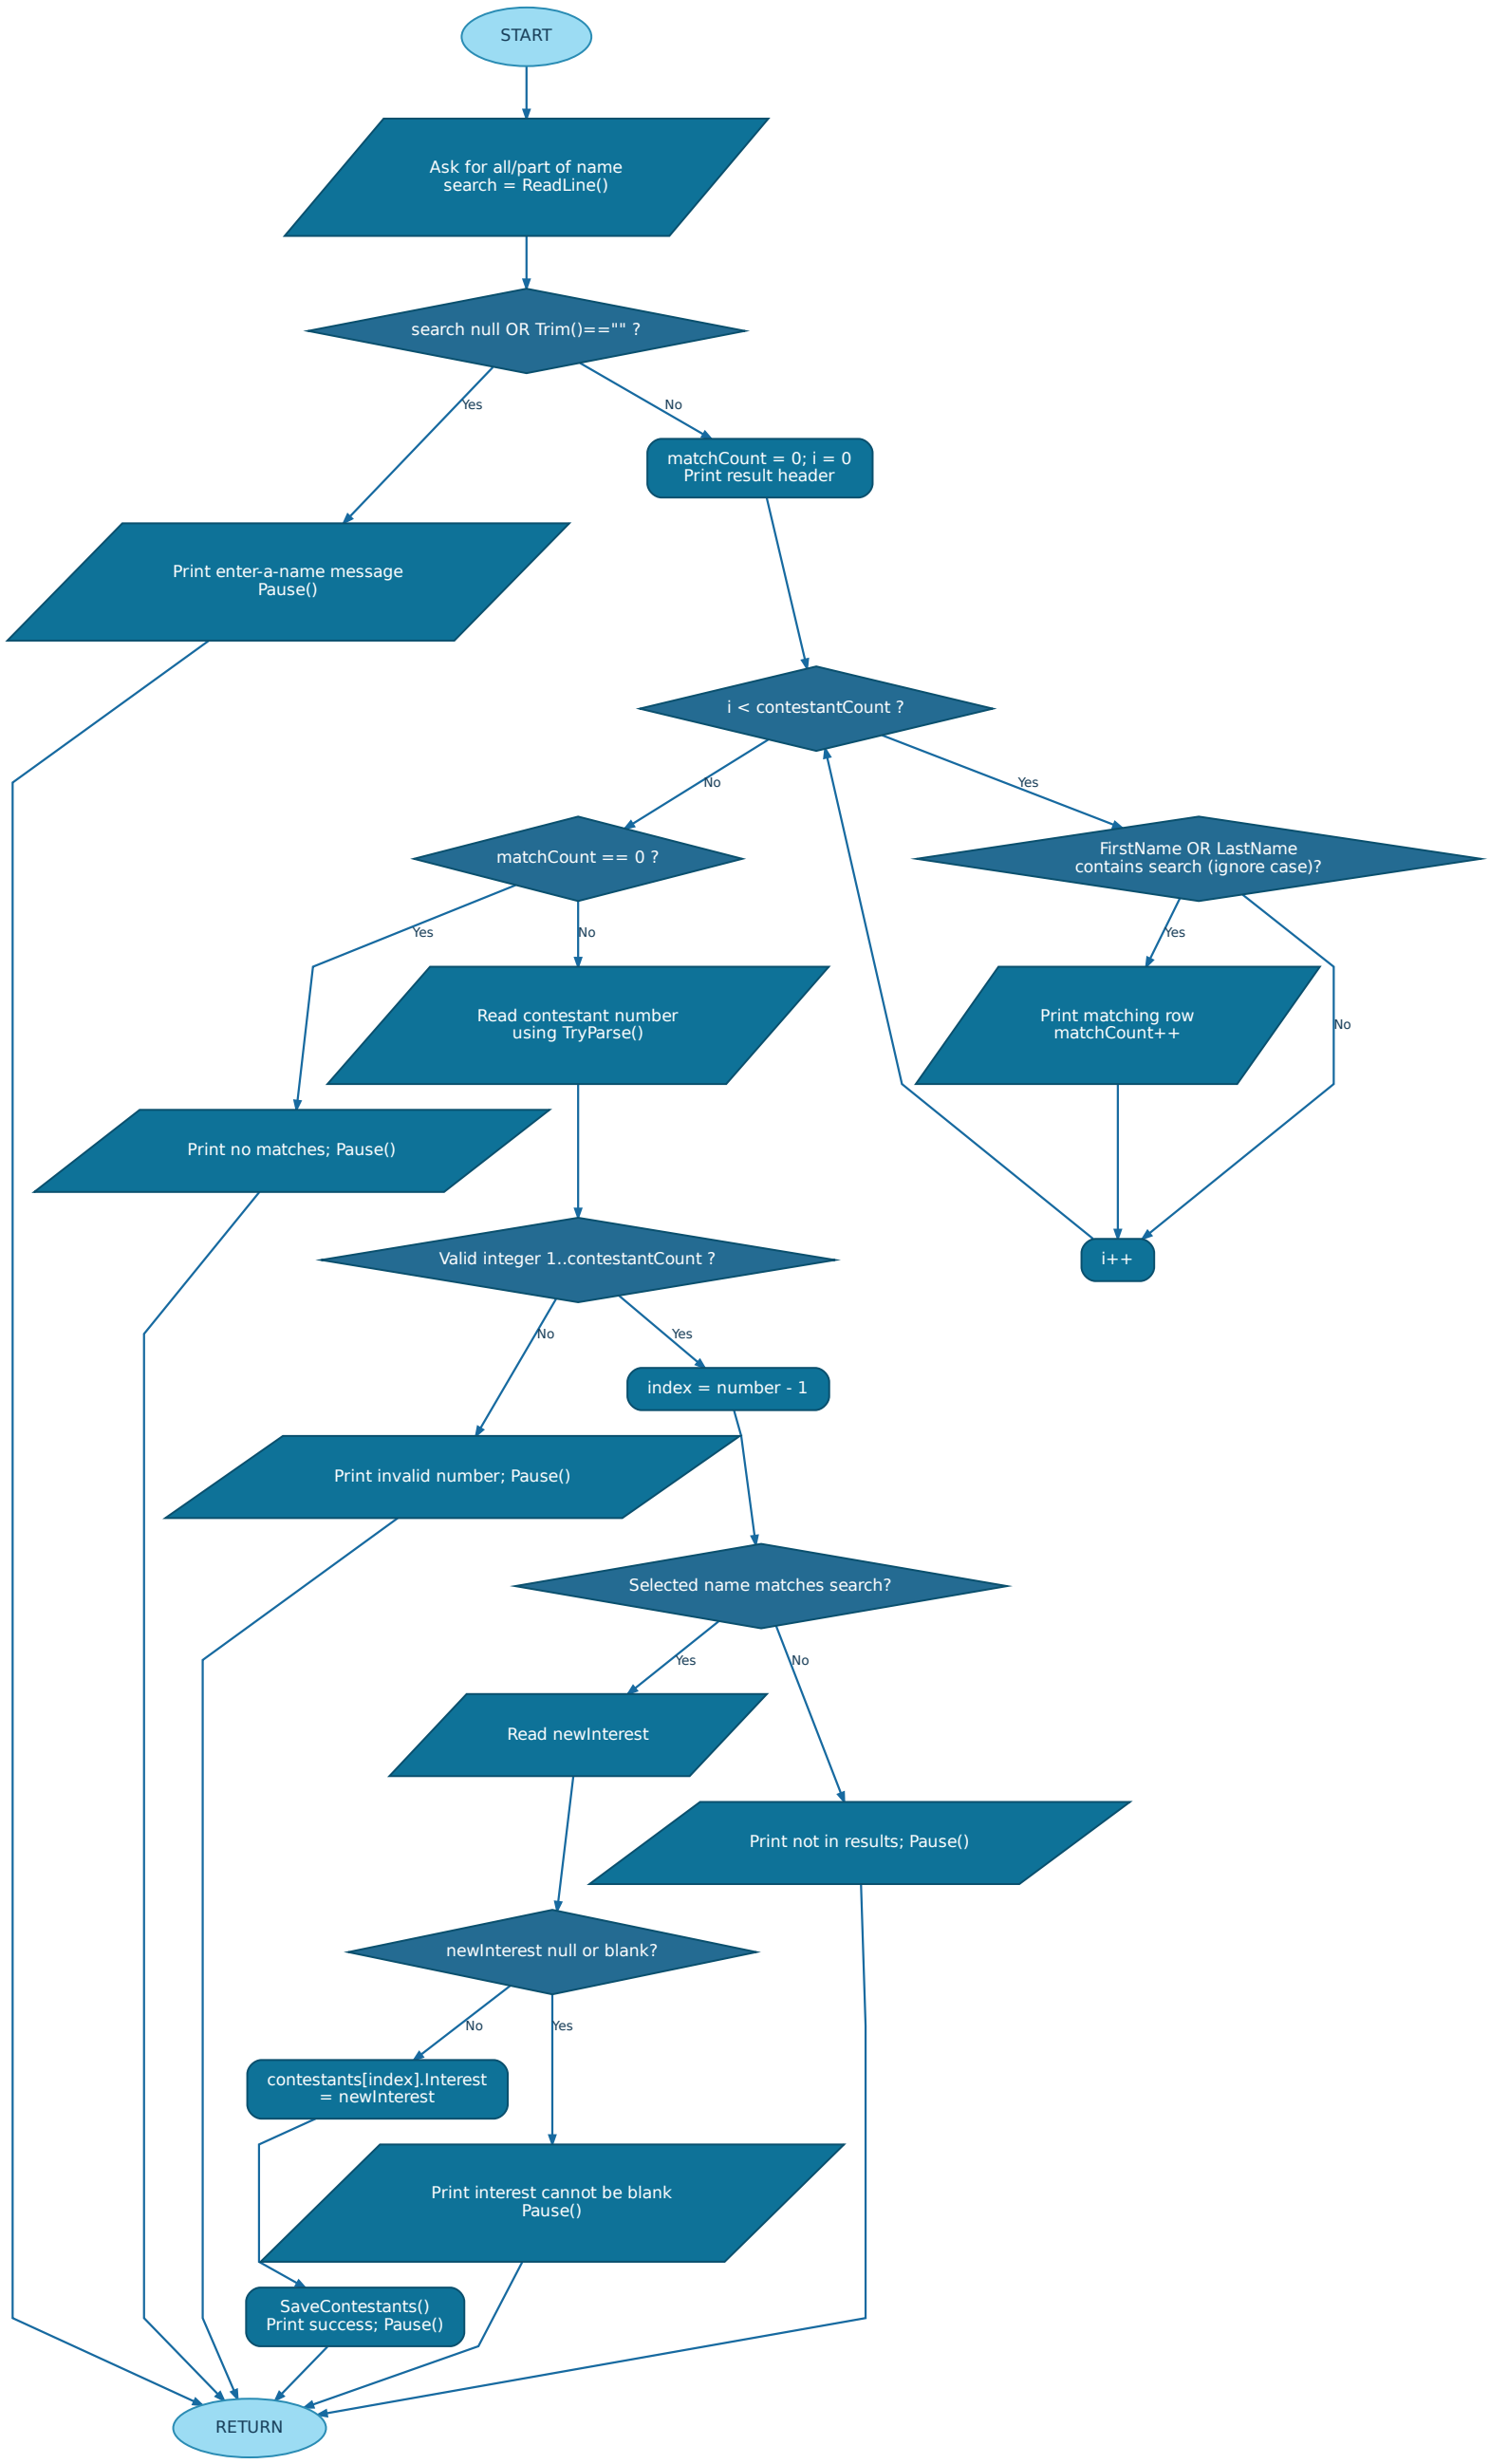

ListContestants()

Display every loaded contestant in padded columns

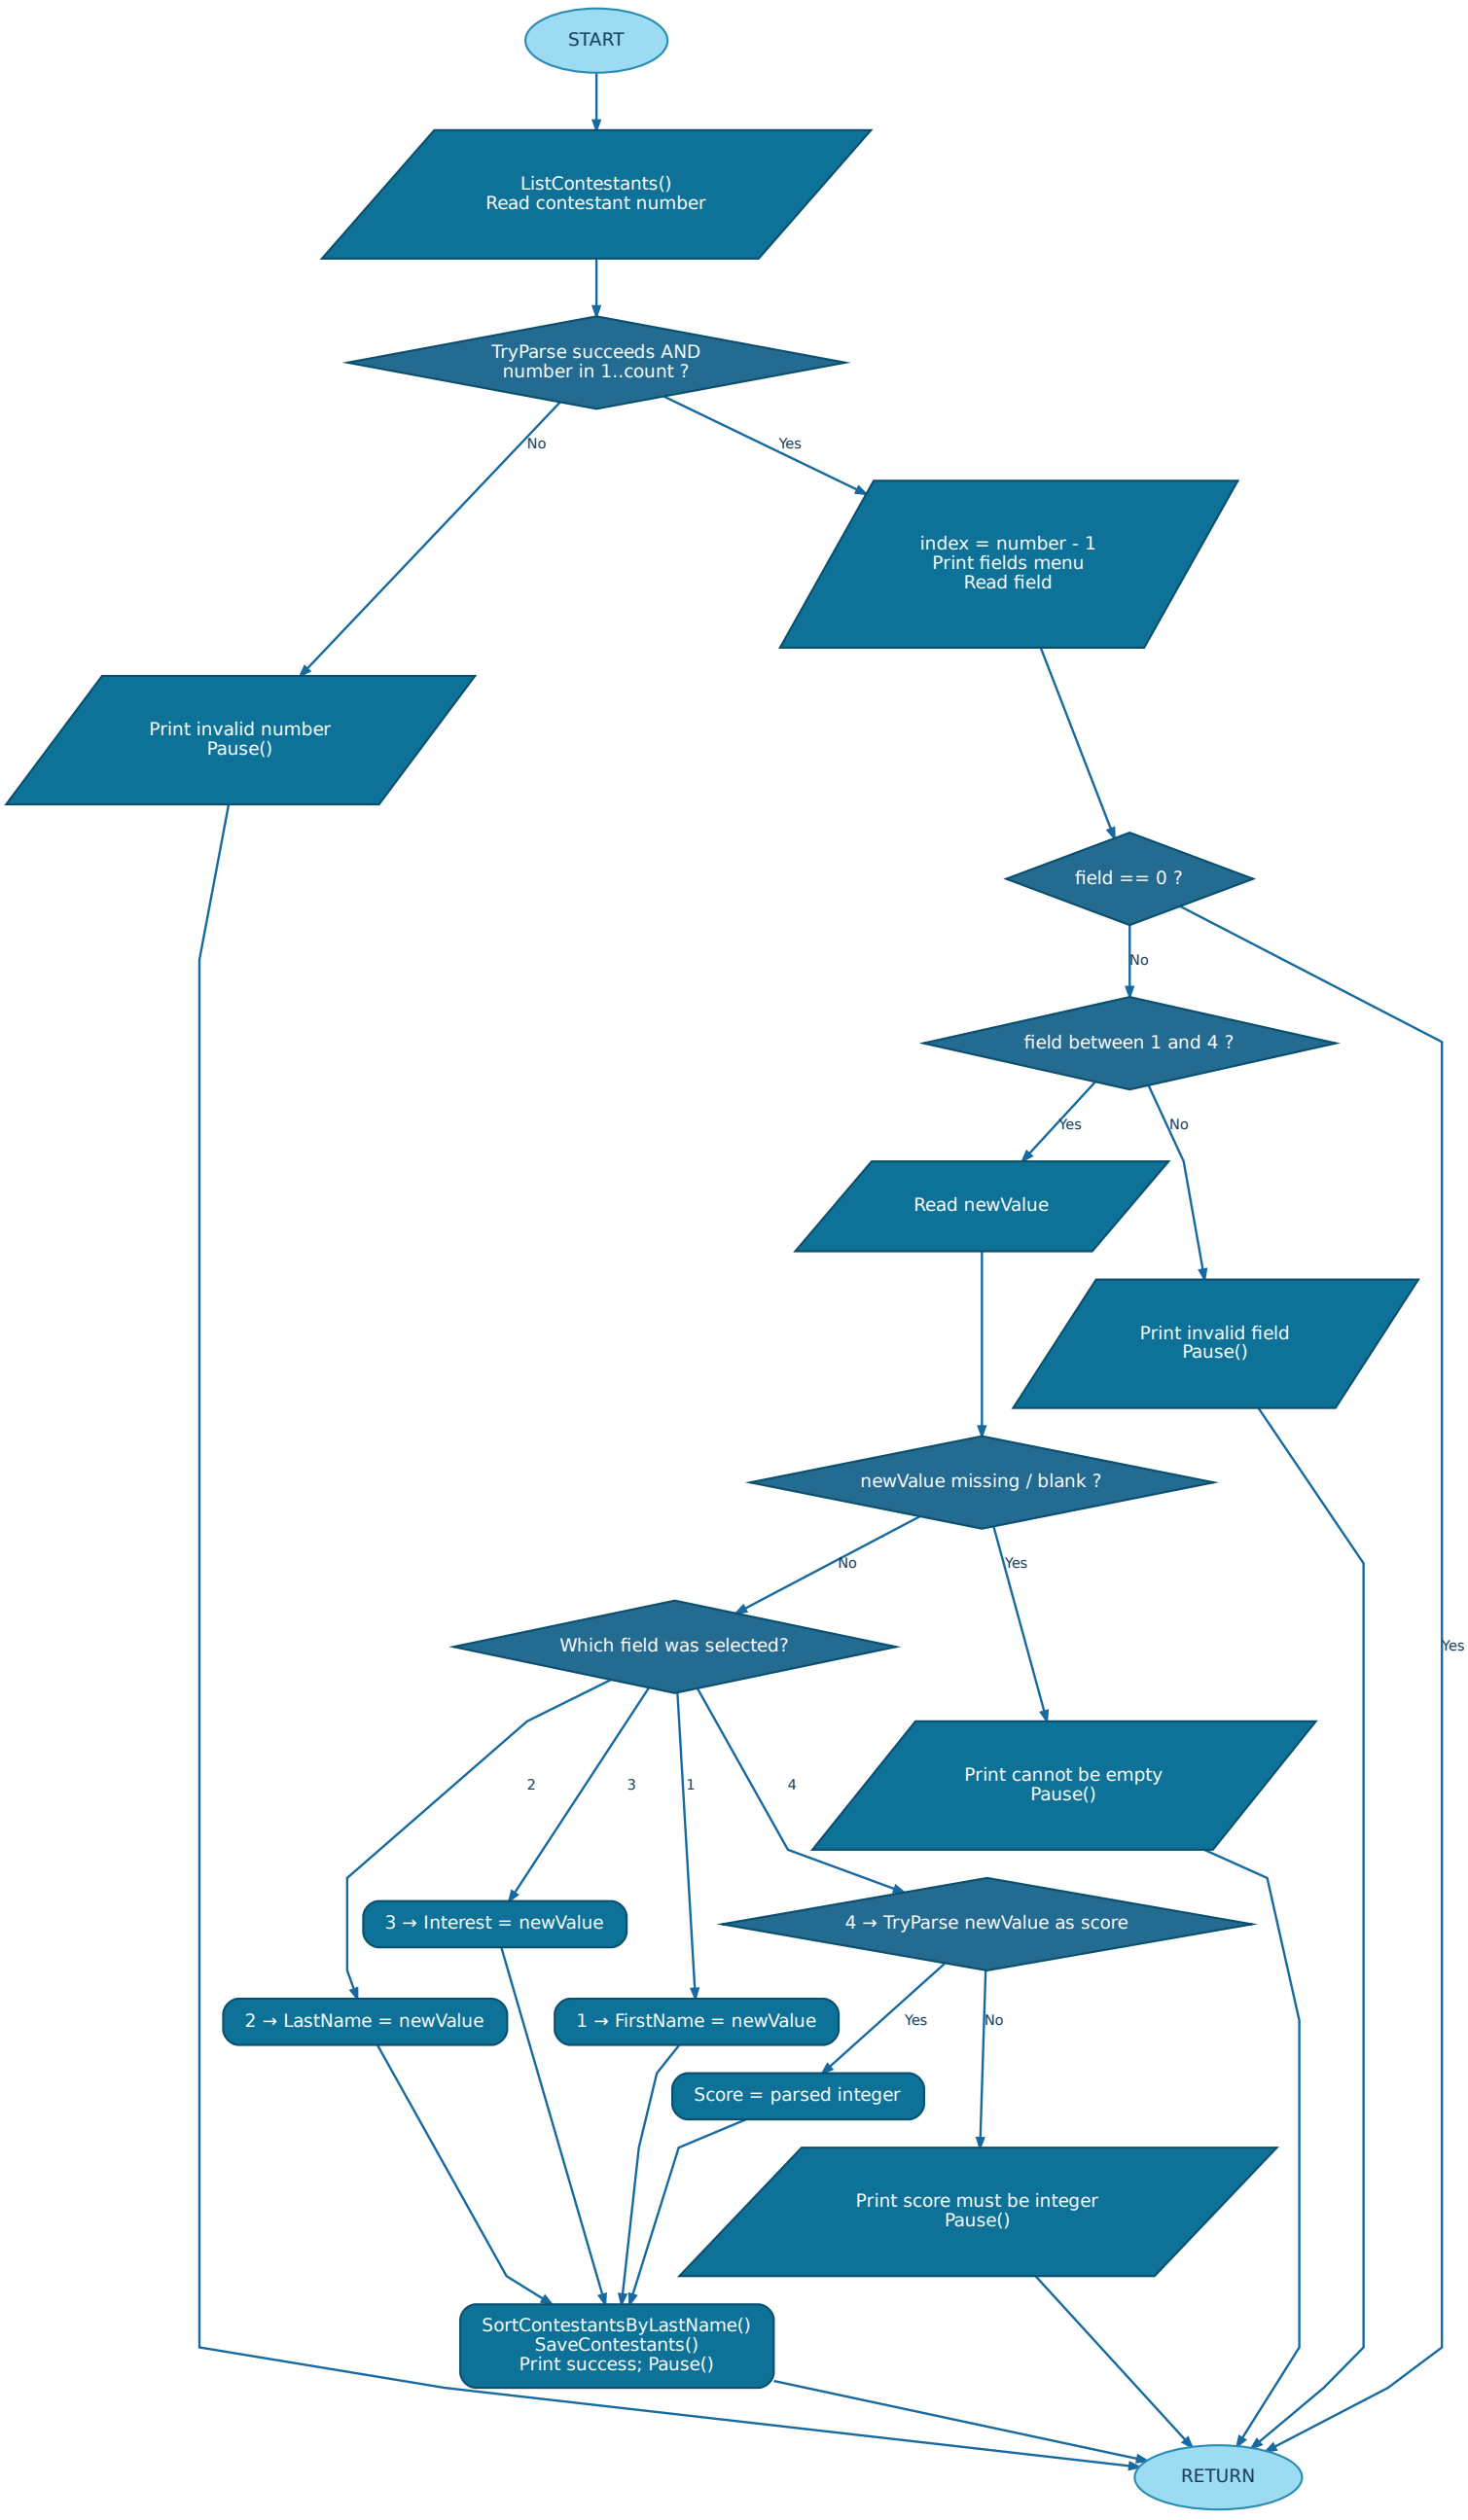

EditInterest()

Search by name, validate an index, edit interest, then save

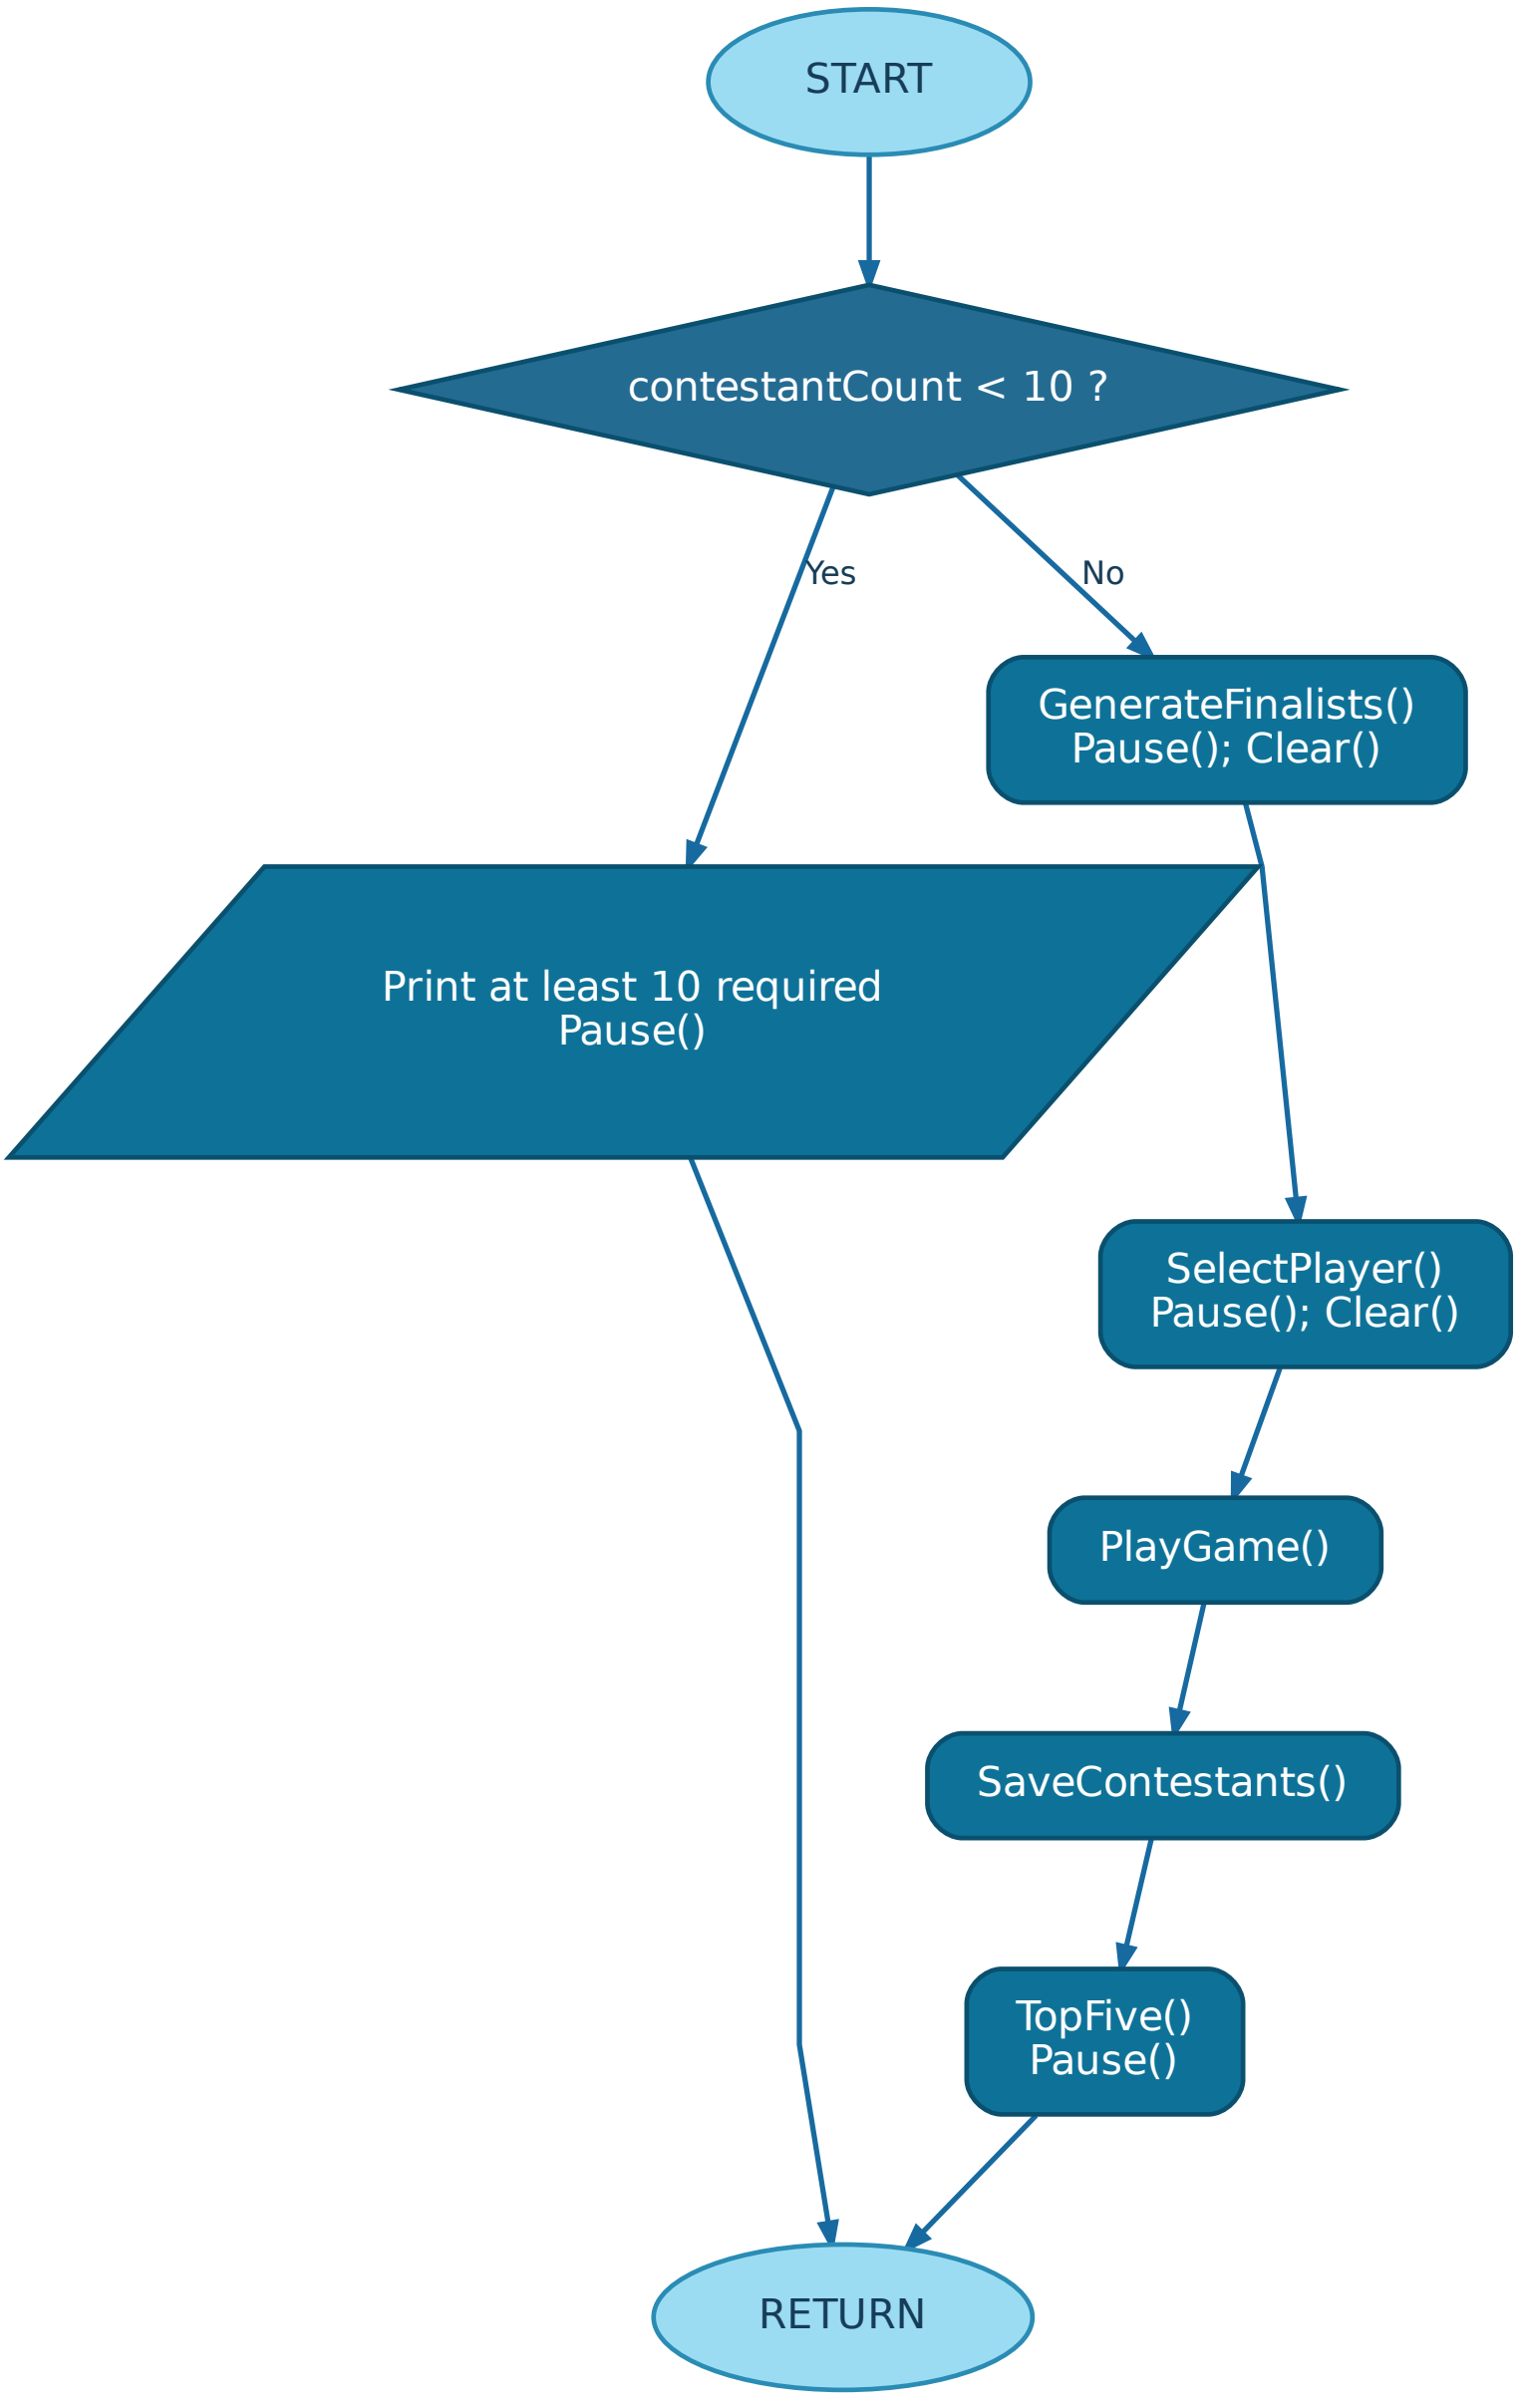

EditDetails()

Extra feature: edit first name, last name, interest or score

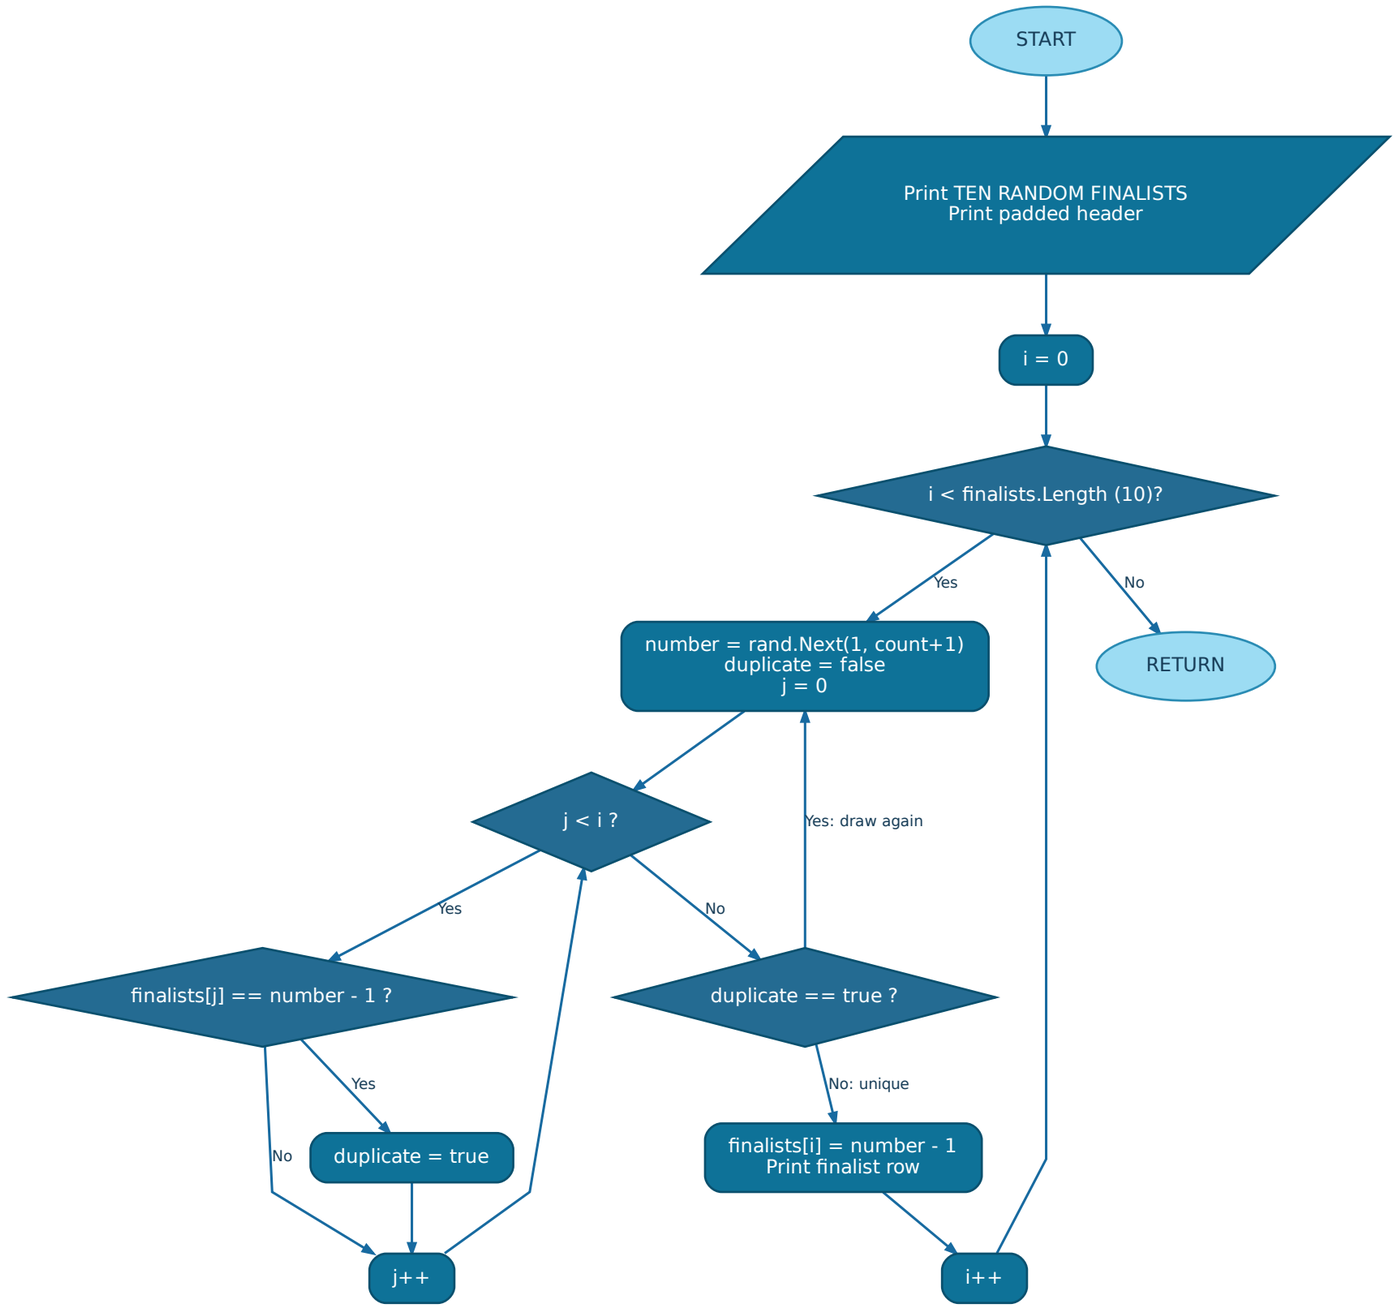

Play()

Game coordinator: choose finalists, select player, play, save score

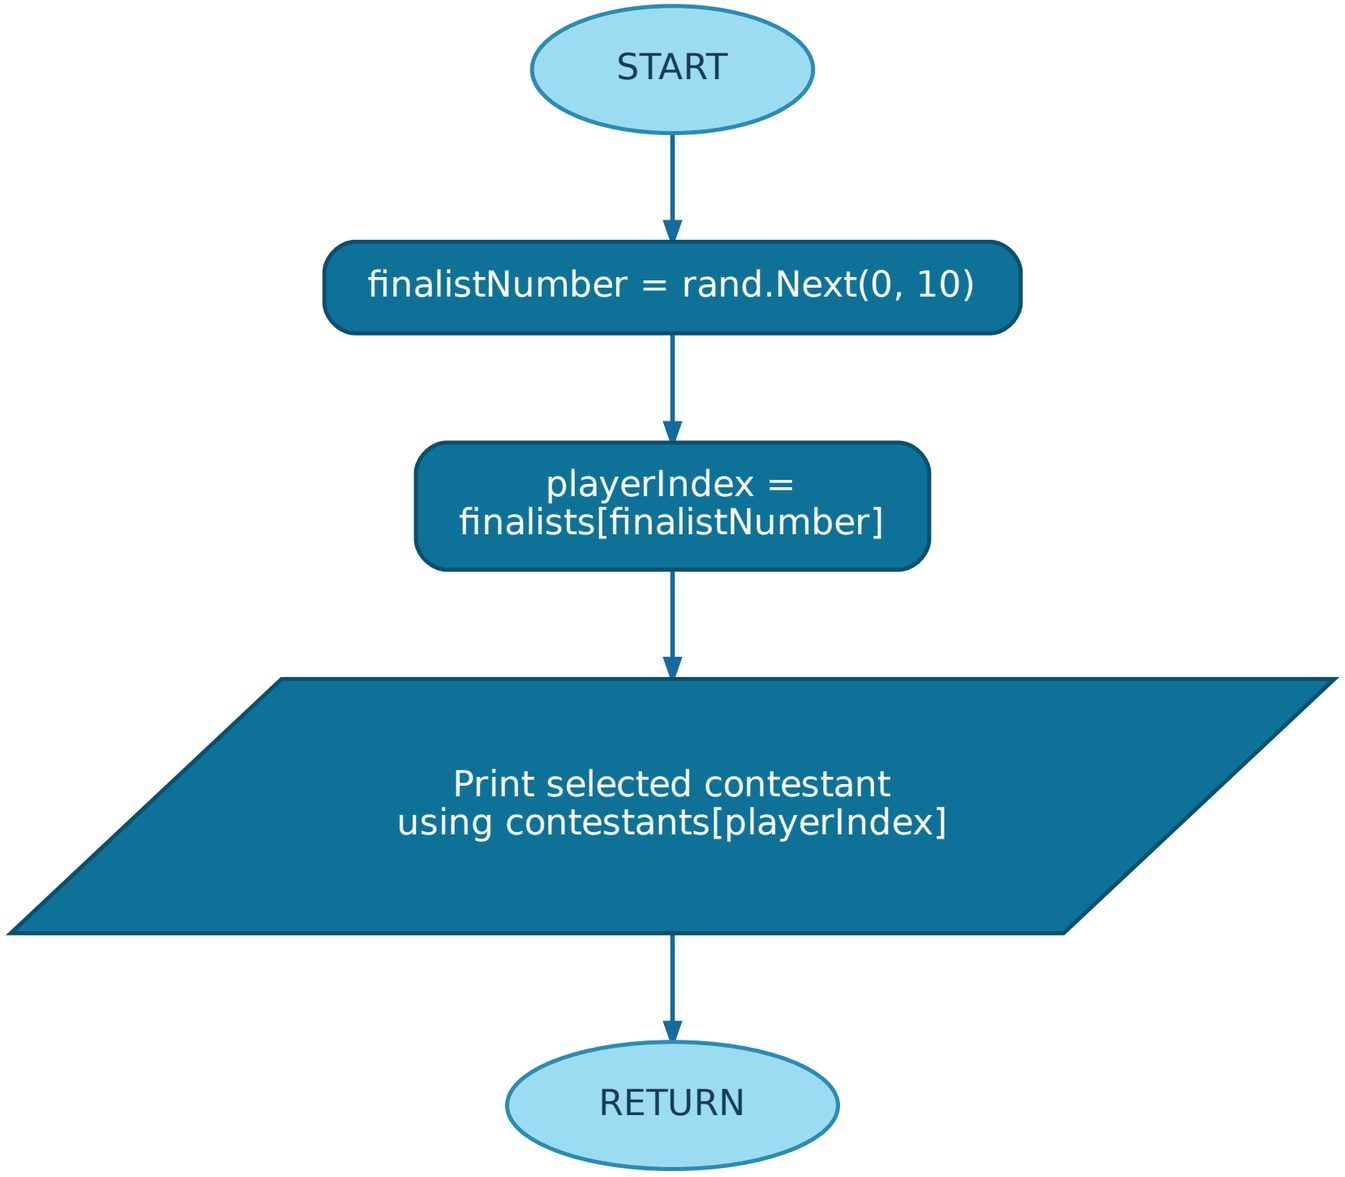

GenerateFinalists()

Required activity diagram · nested loops and do...while prevent duplicates

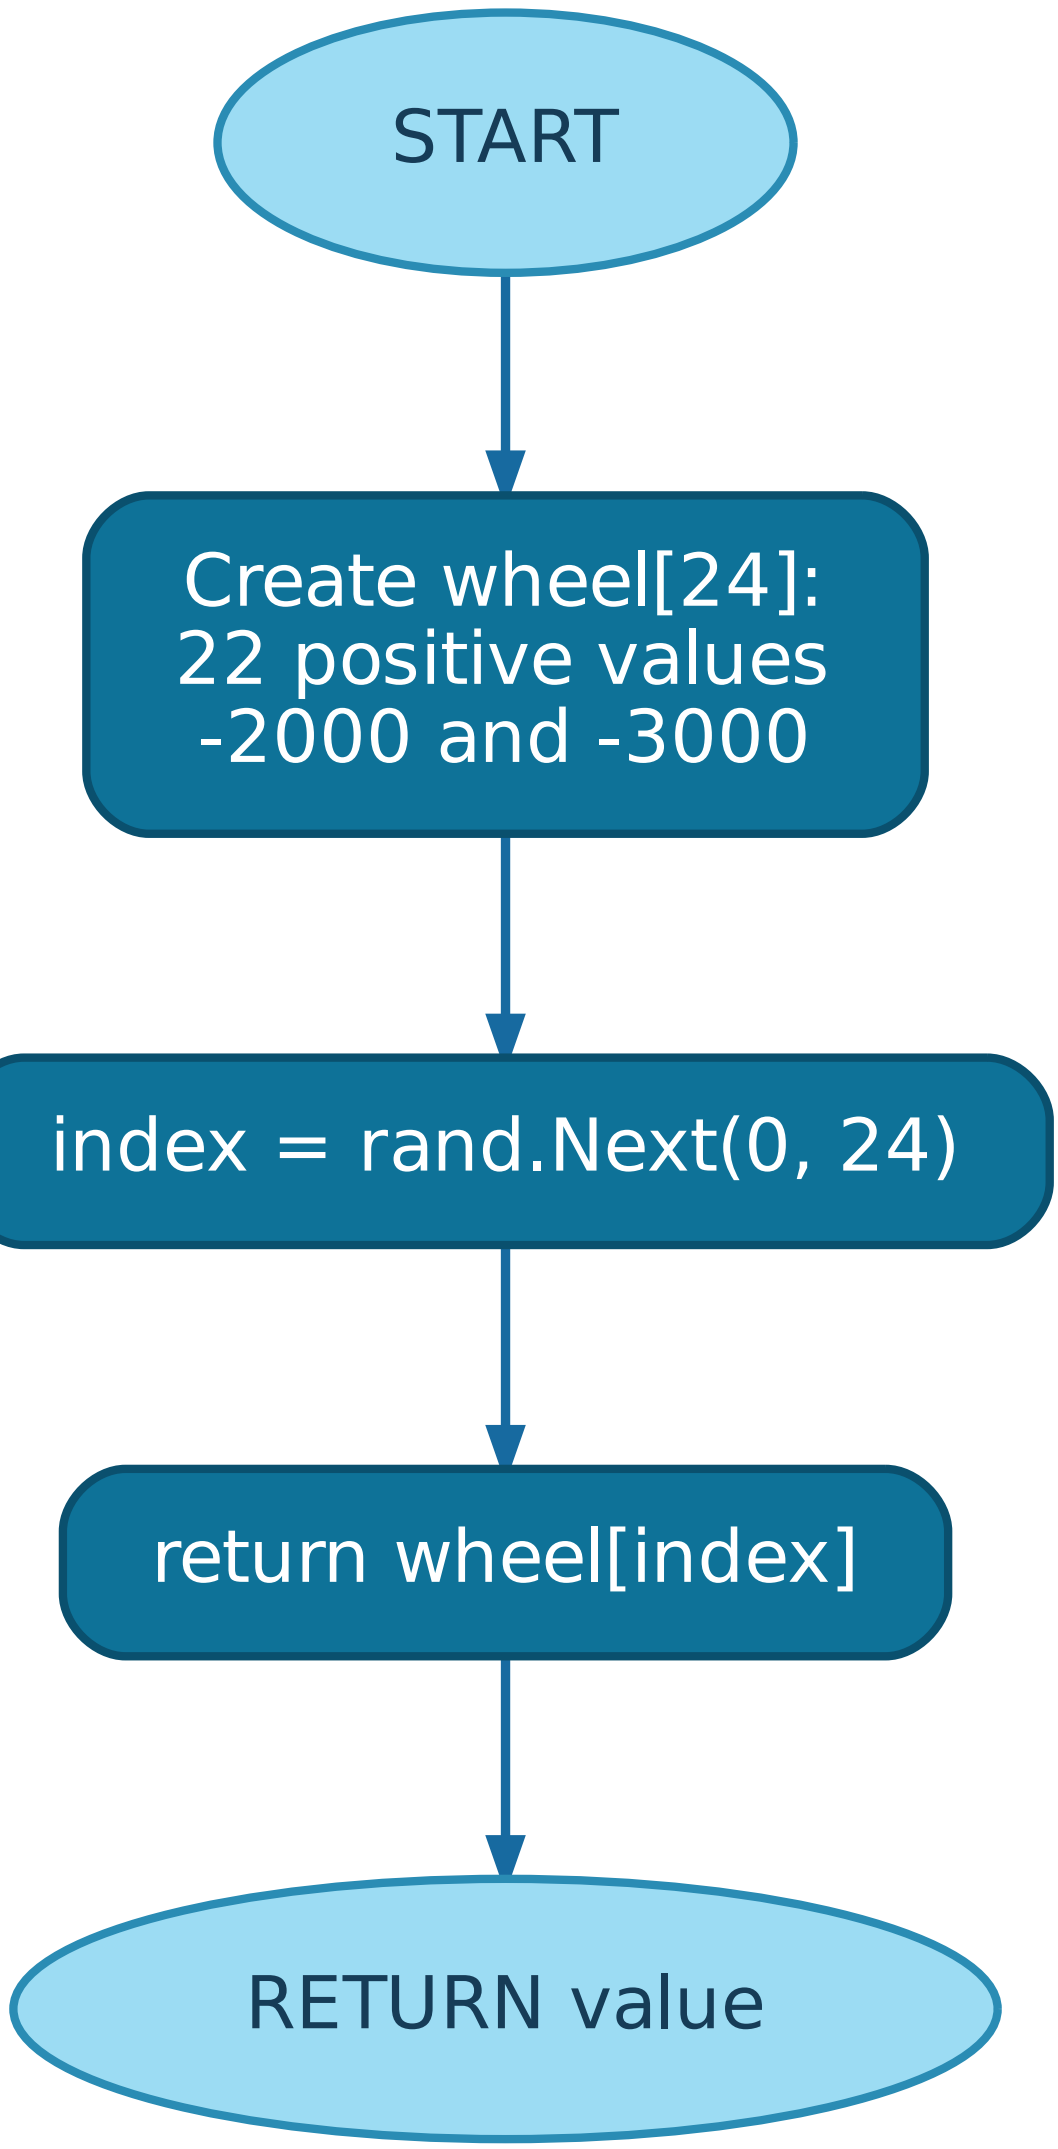

SelectPlayer()

Choose one of the ten finalists, then look up their contestant record

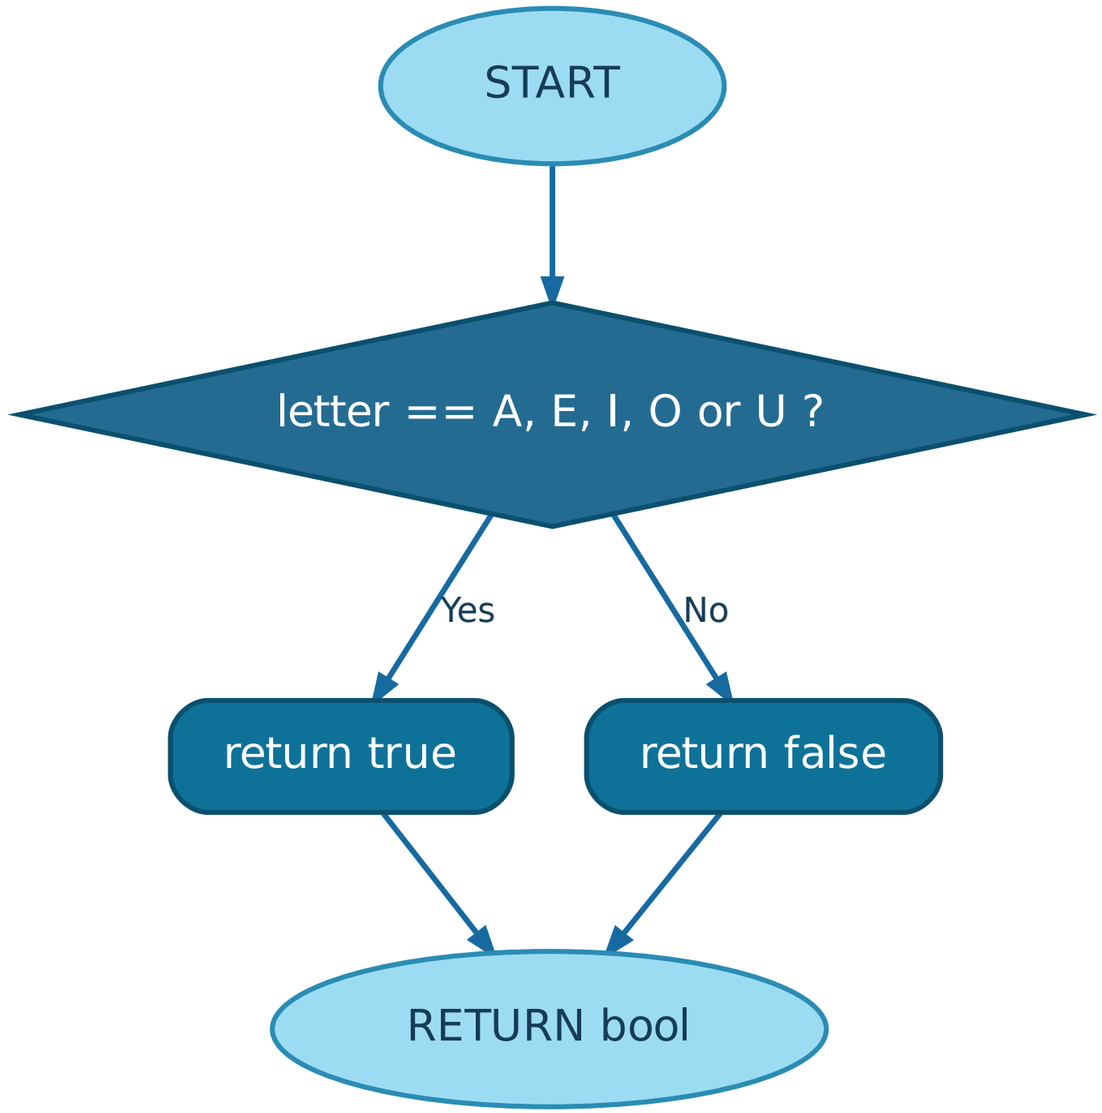

SpinWheel()

Randomly return a value from 22 cash and 2 penalty segments

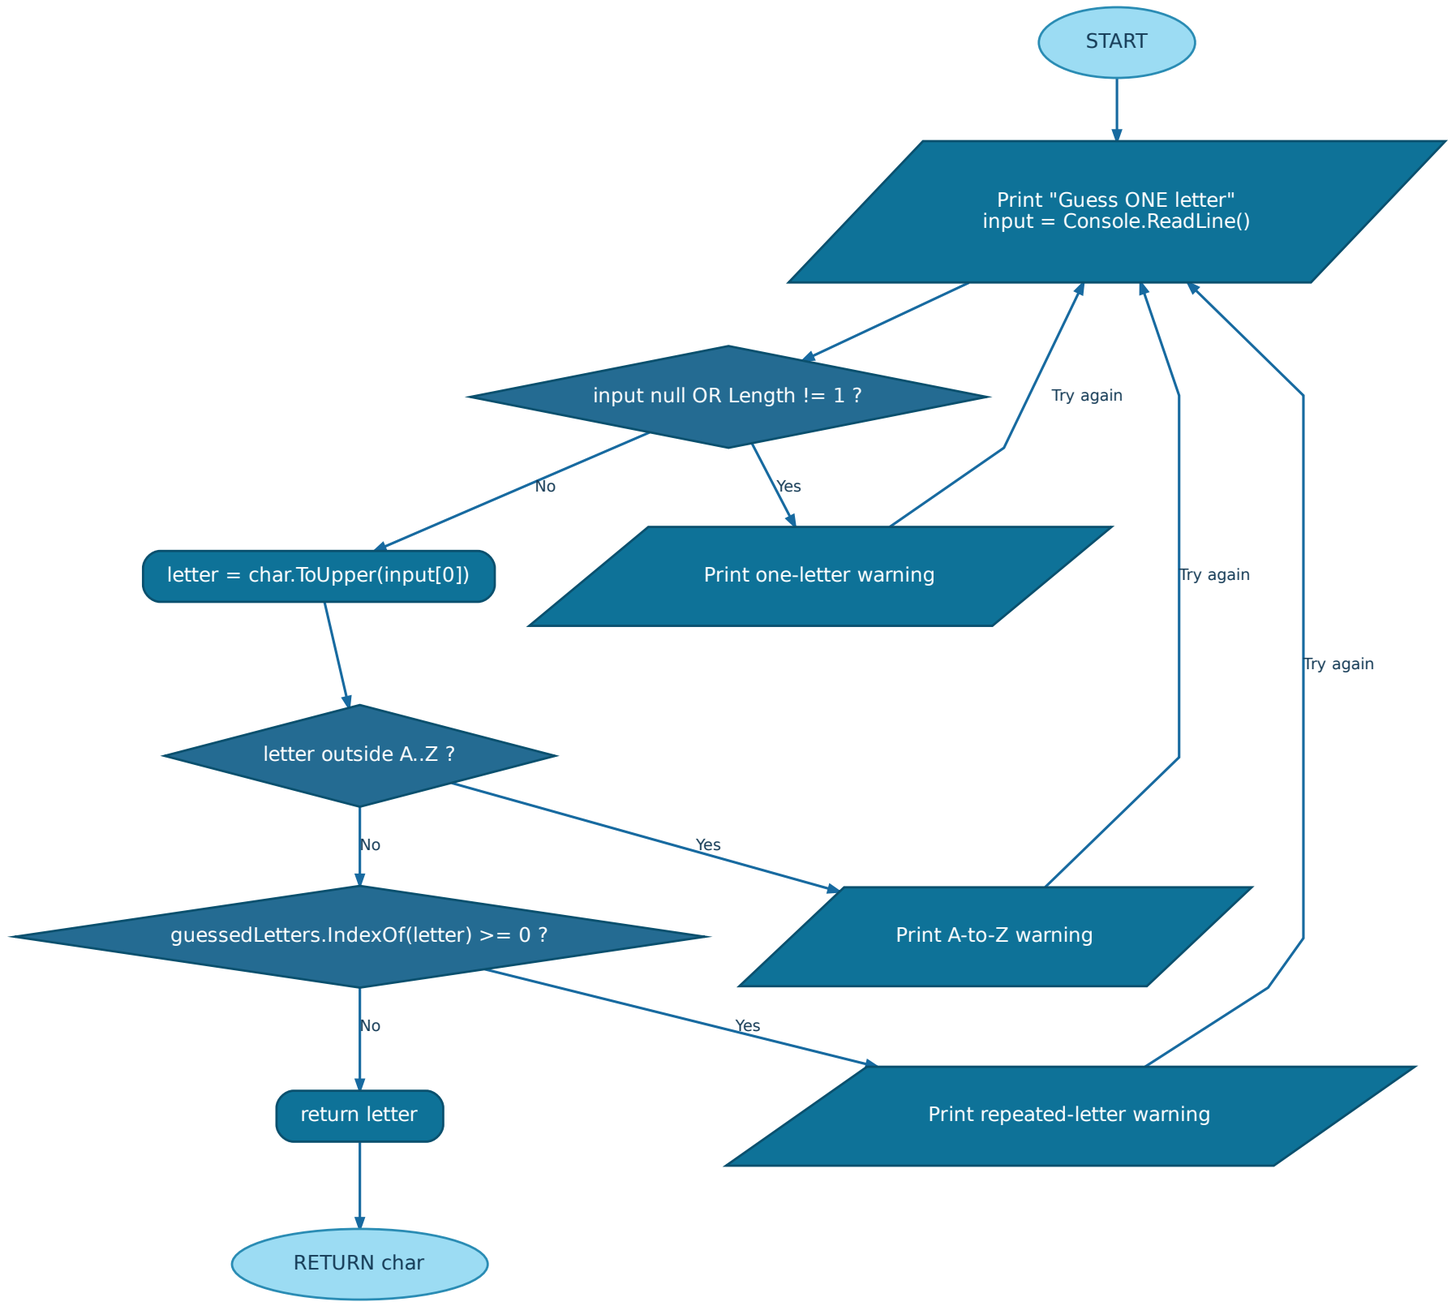

IsVowel(char letter)

Return true if the guessed uppercase character is A, E, I, O, or U

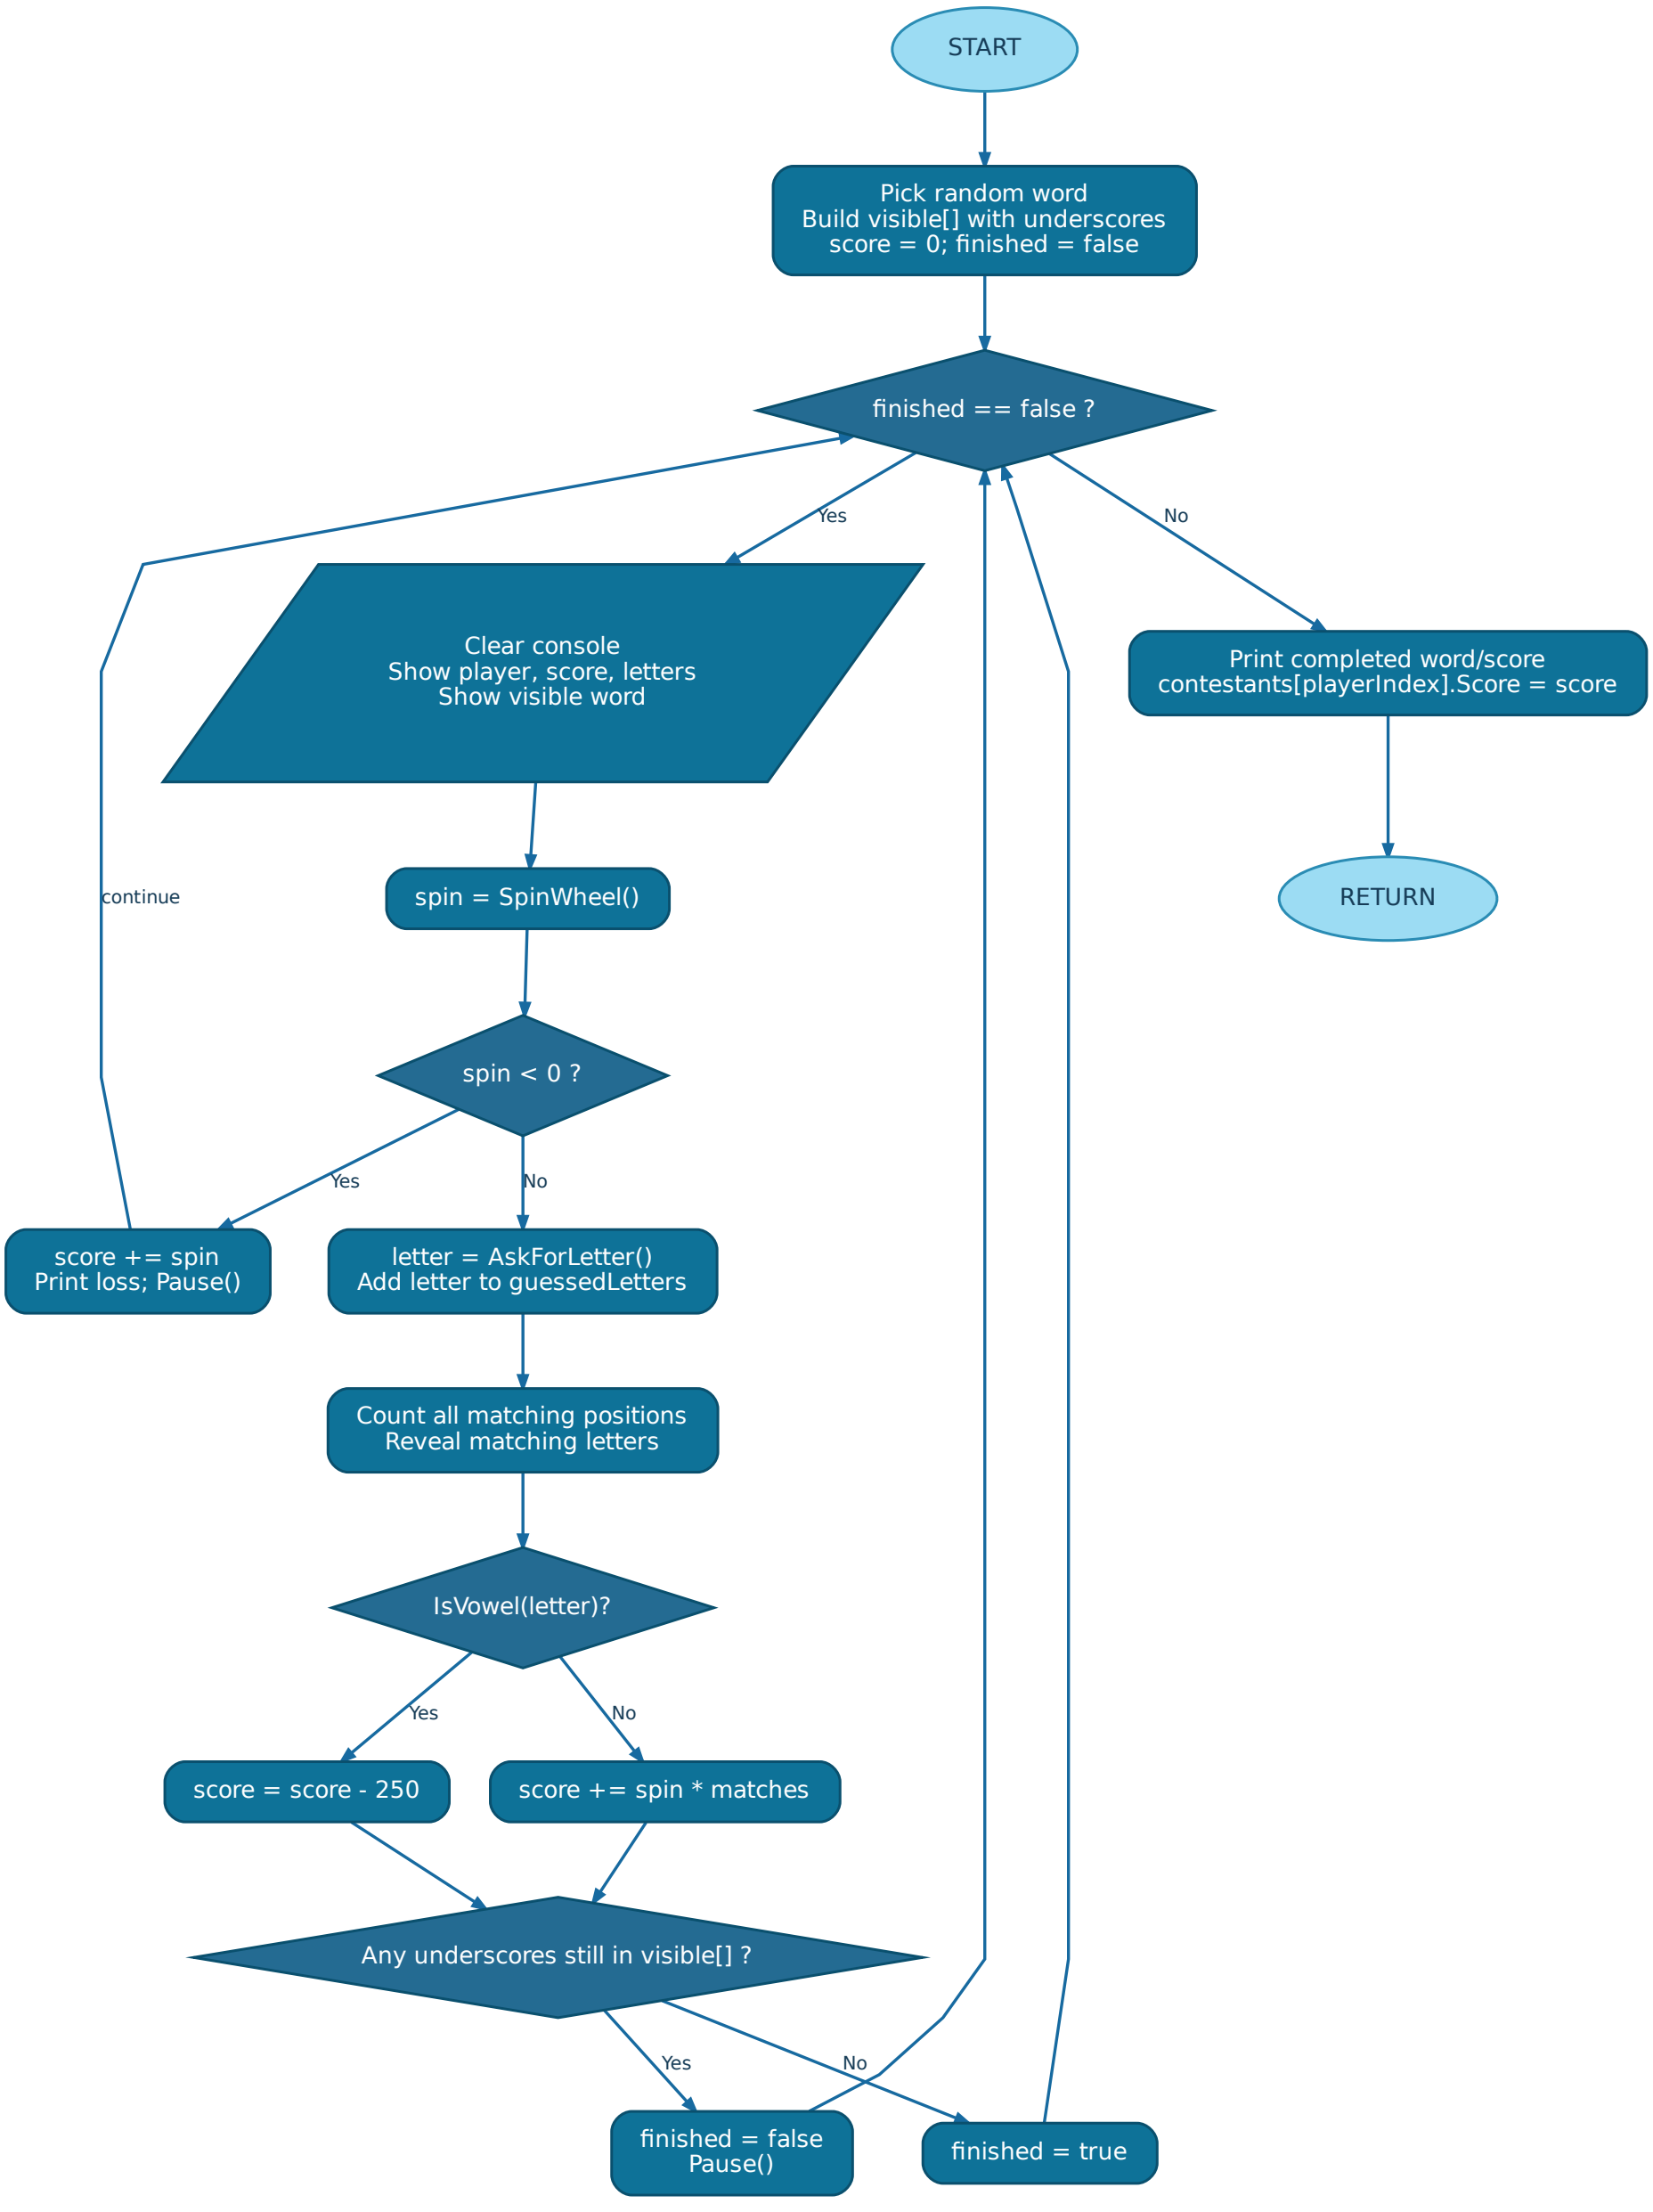

AskForLetter(guessedLetters)

Validate one English letter, uppercase it, reject repeats

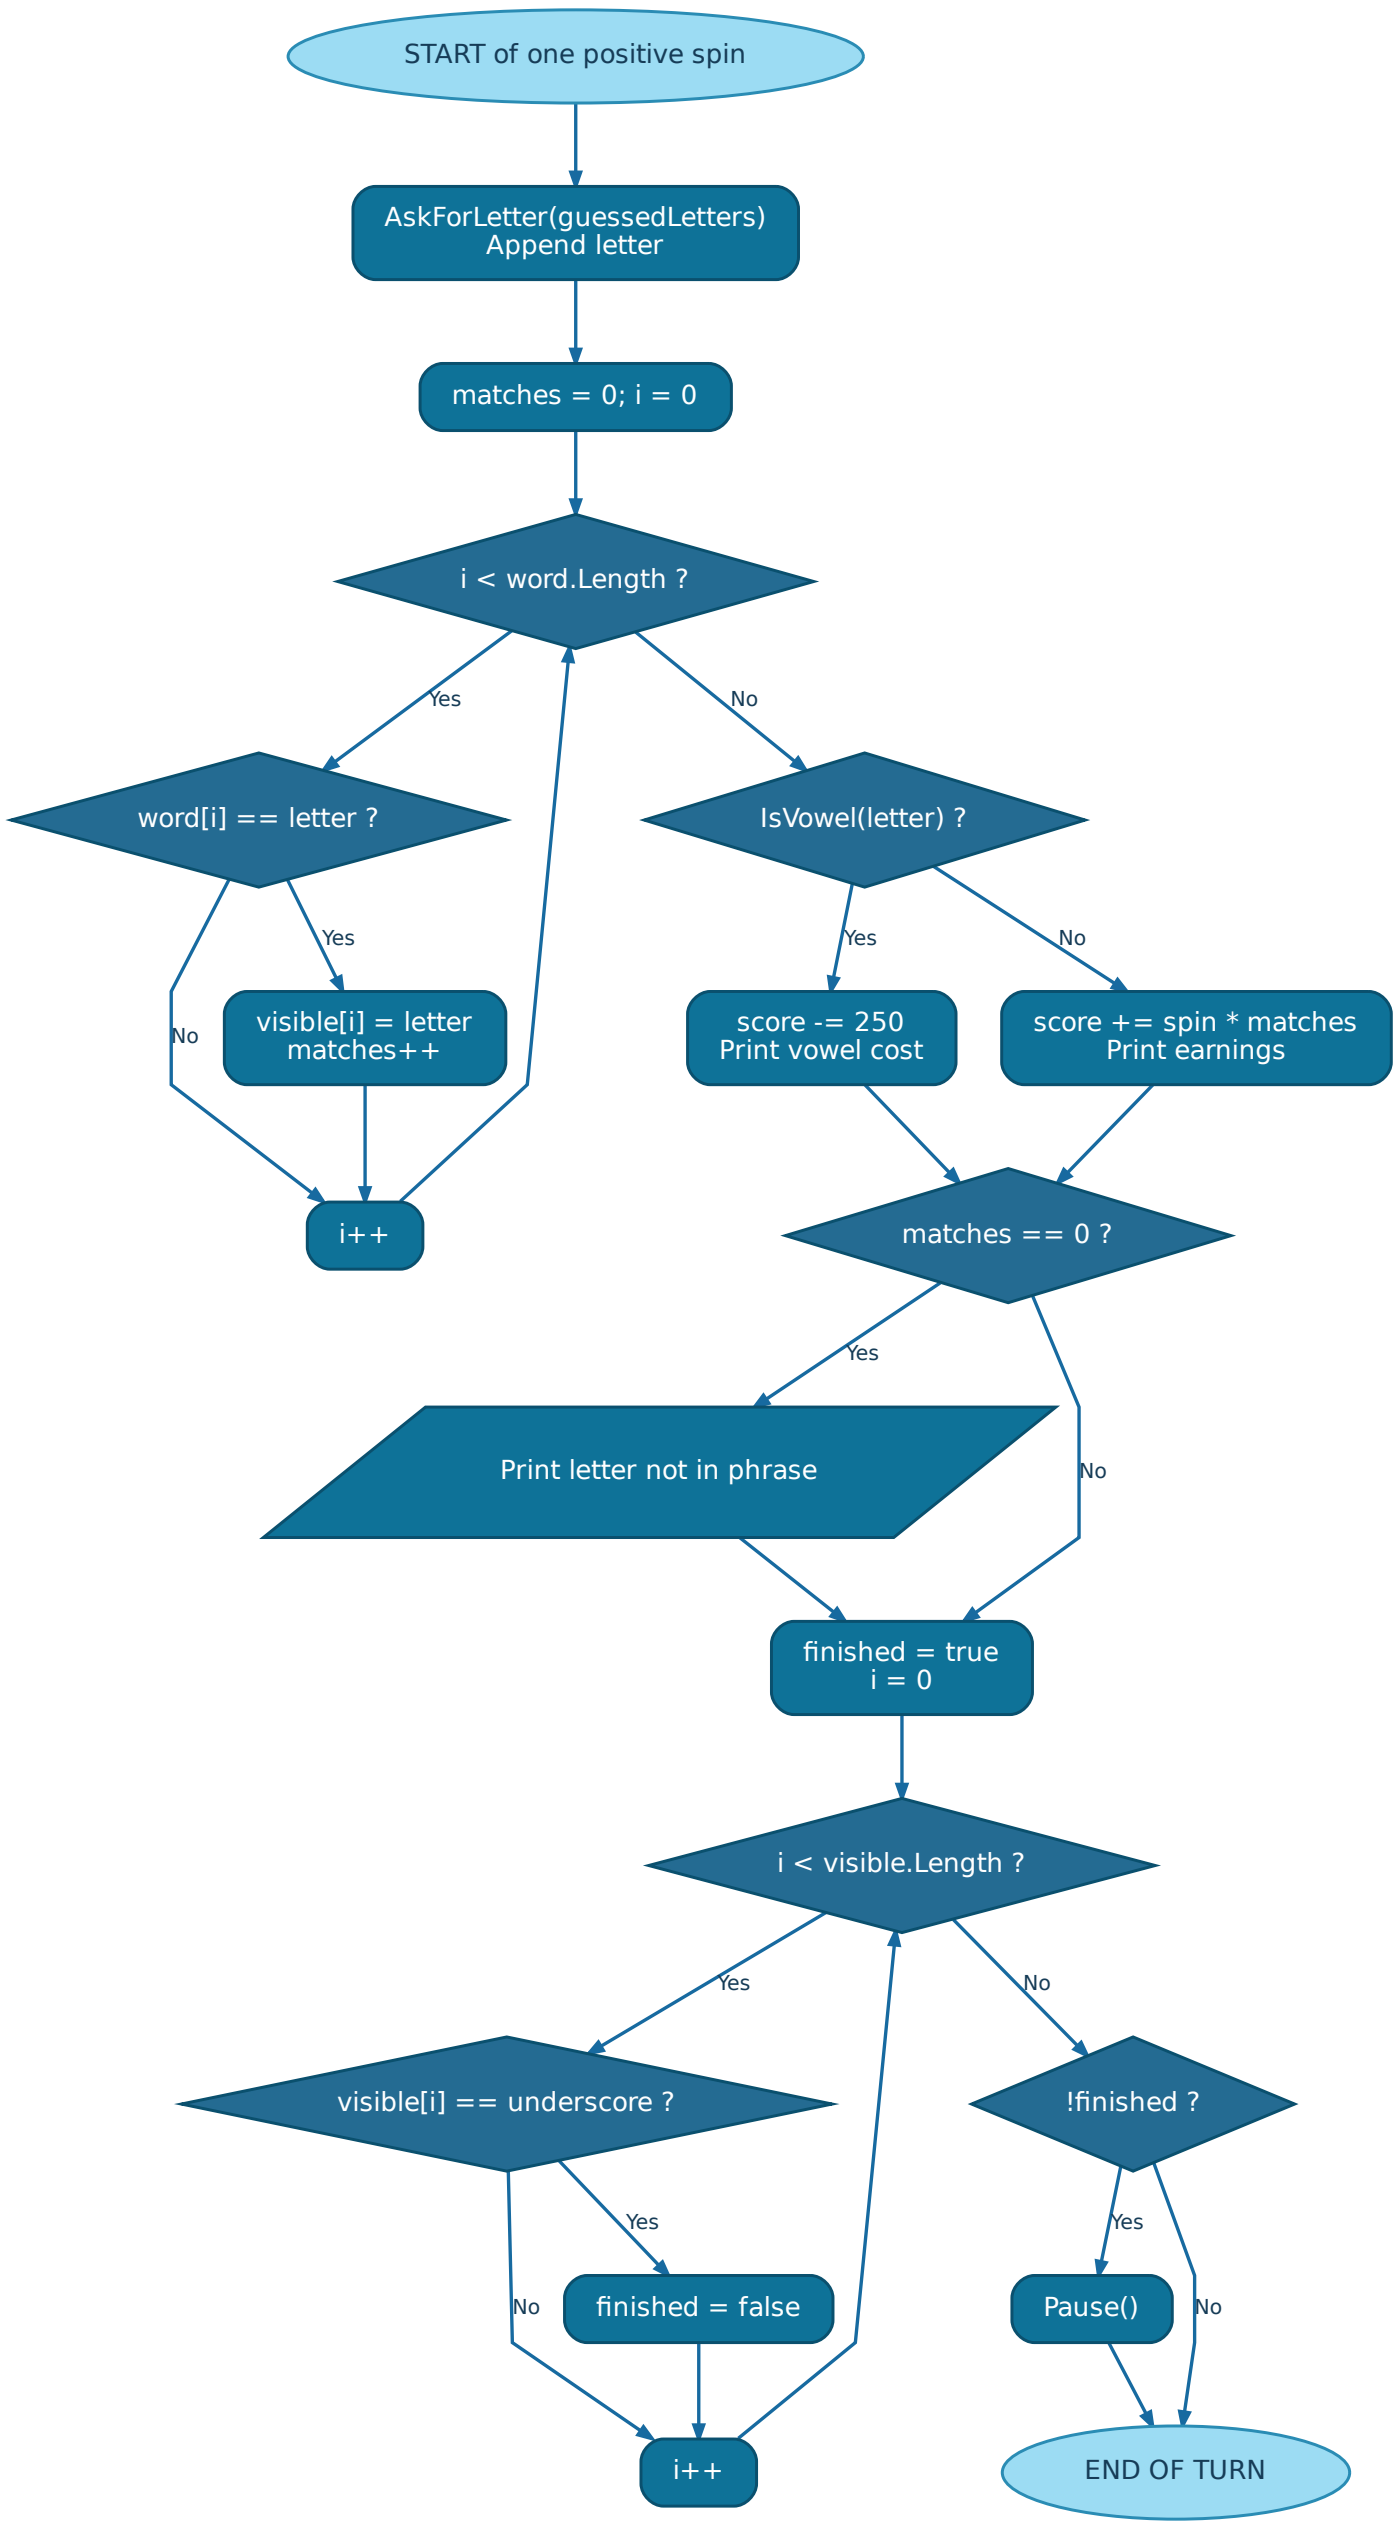

PlayGame() · complete logic

One-page overview of the game's while loop and its outcomes

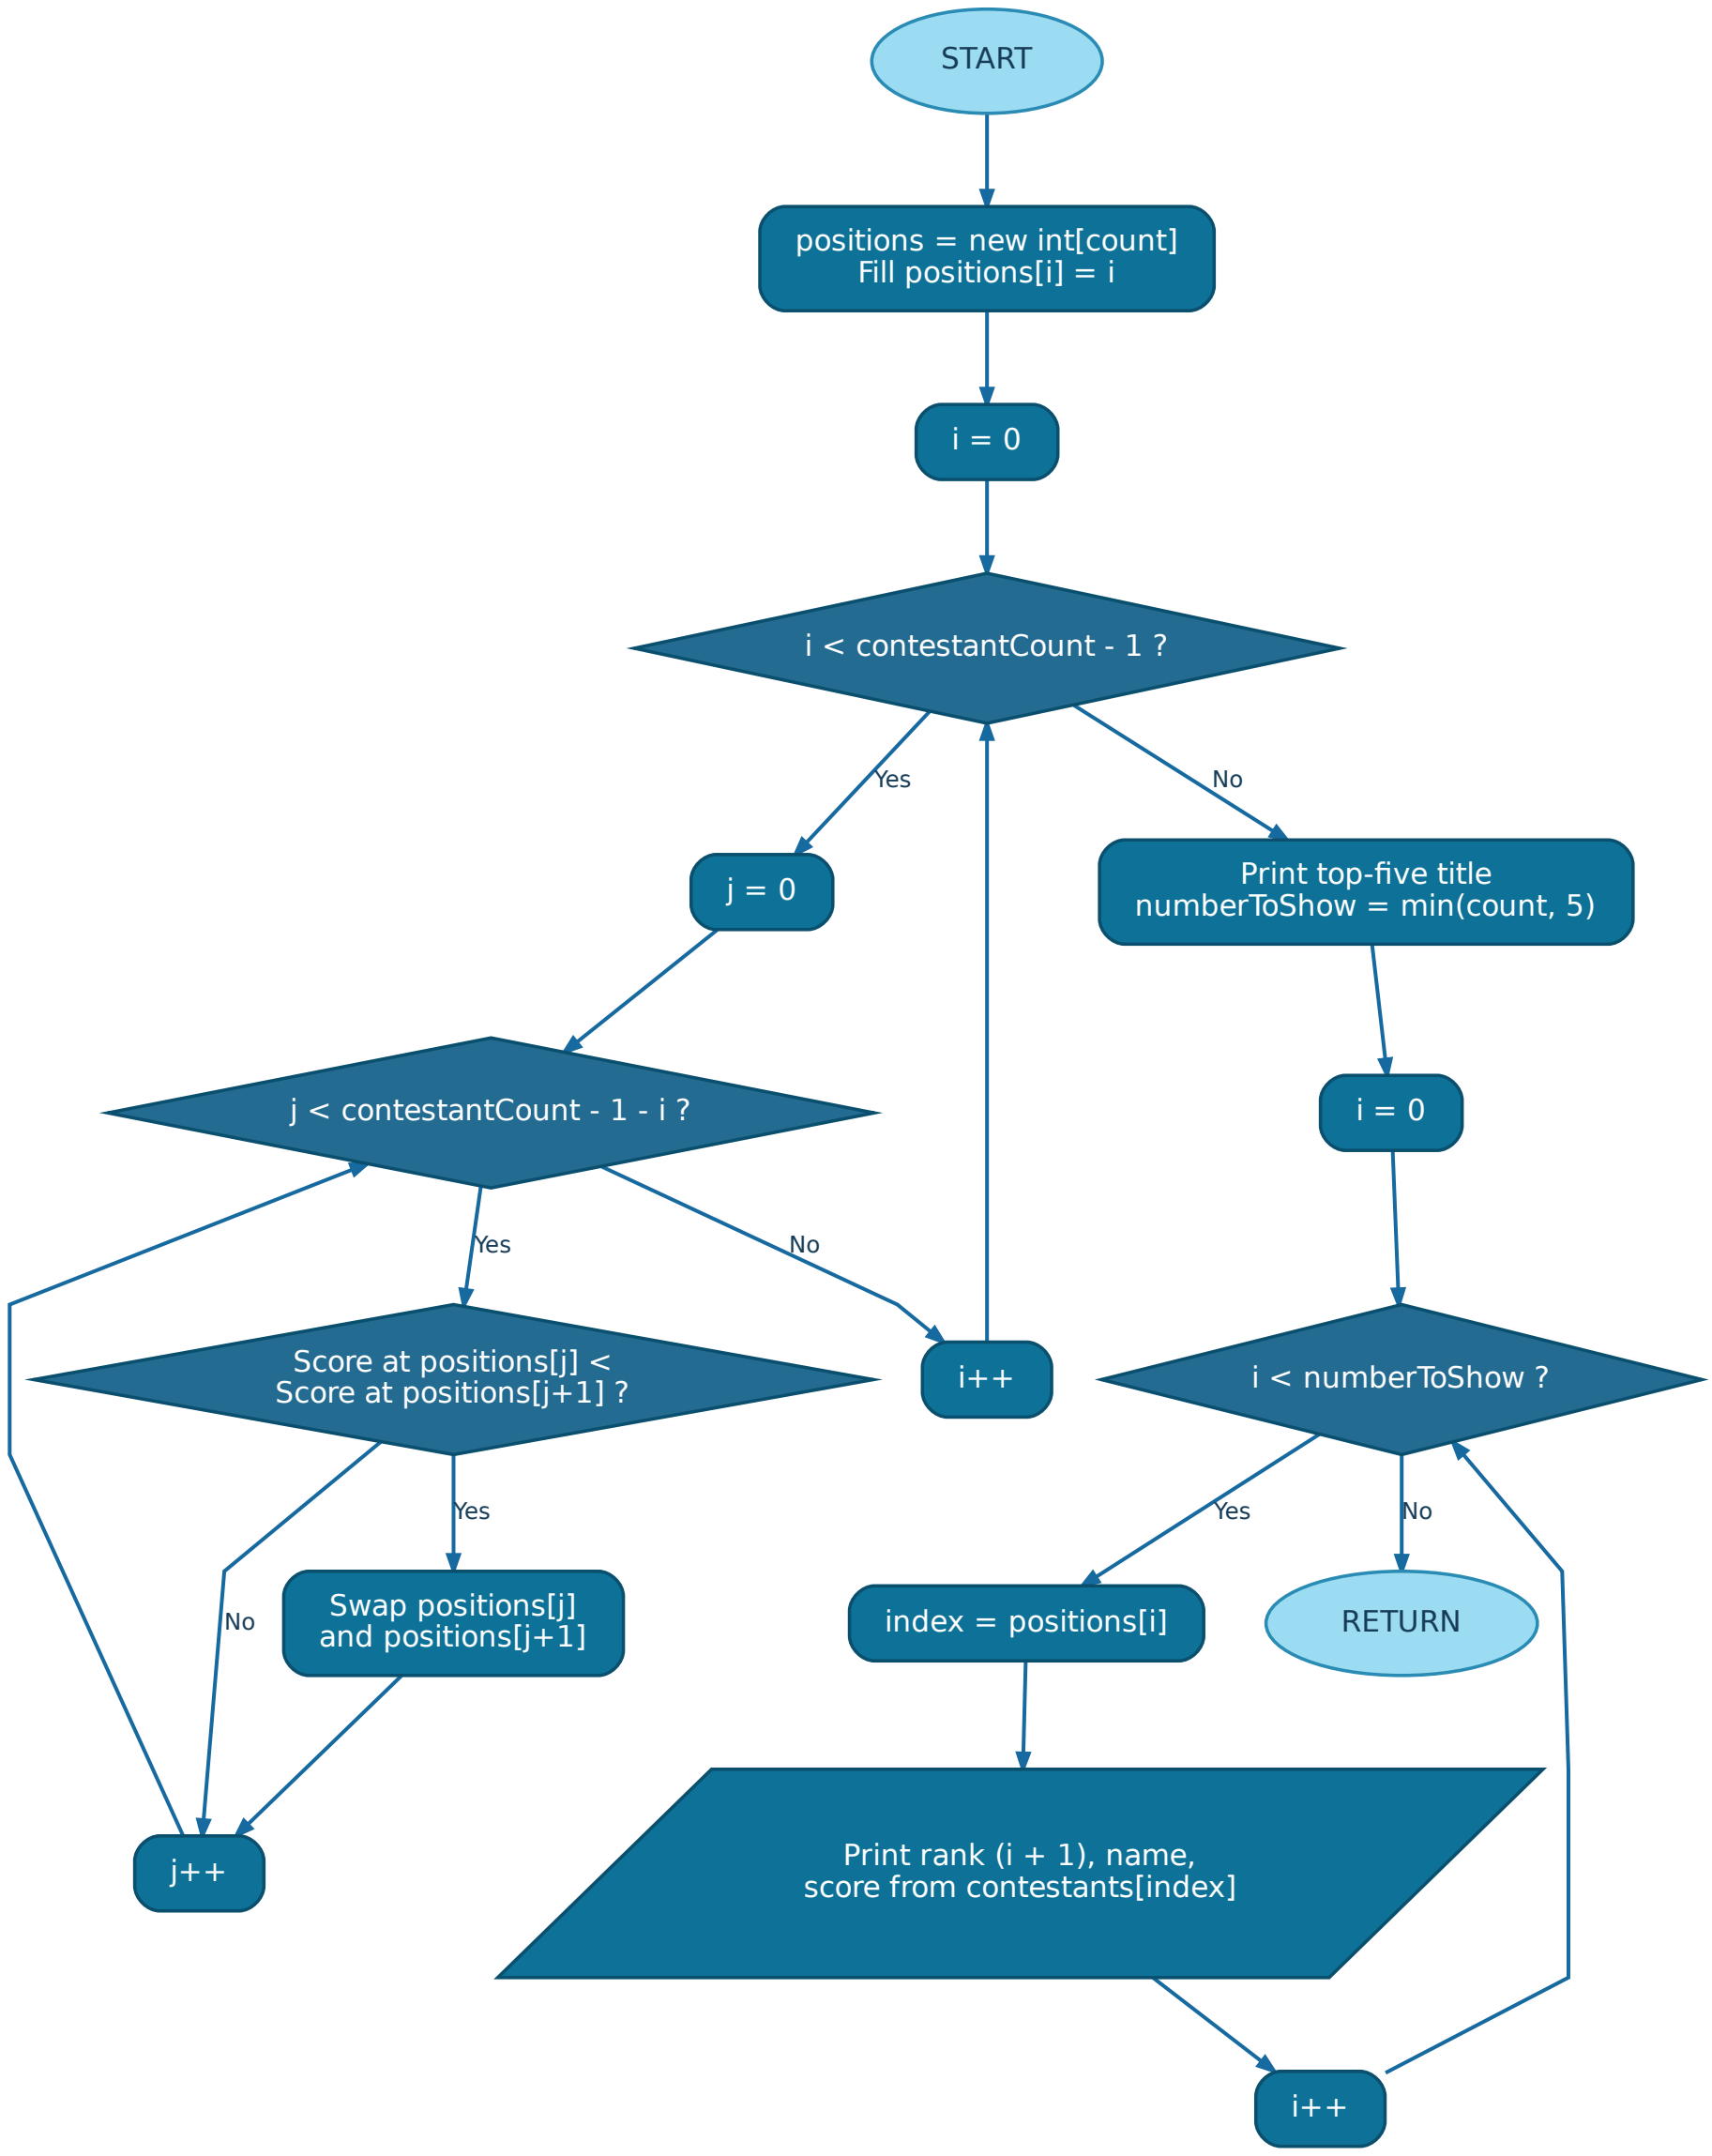

PlayGame() · guessing and scoring

More detail: loop over word characters, reveal matches, detect completion

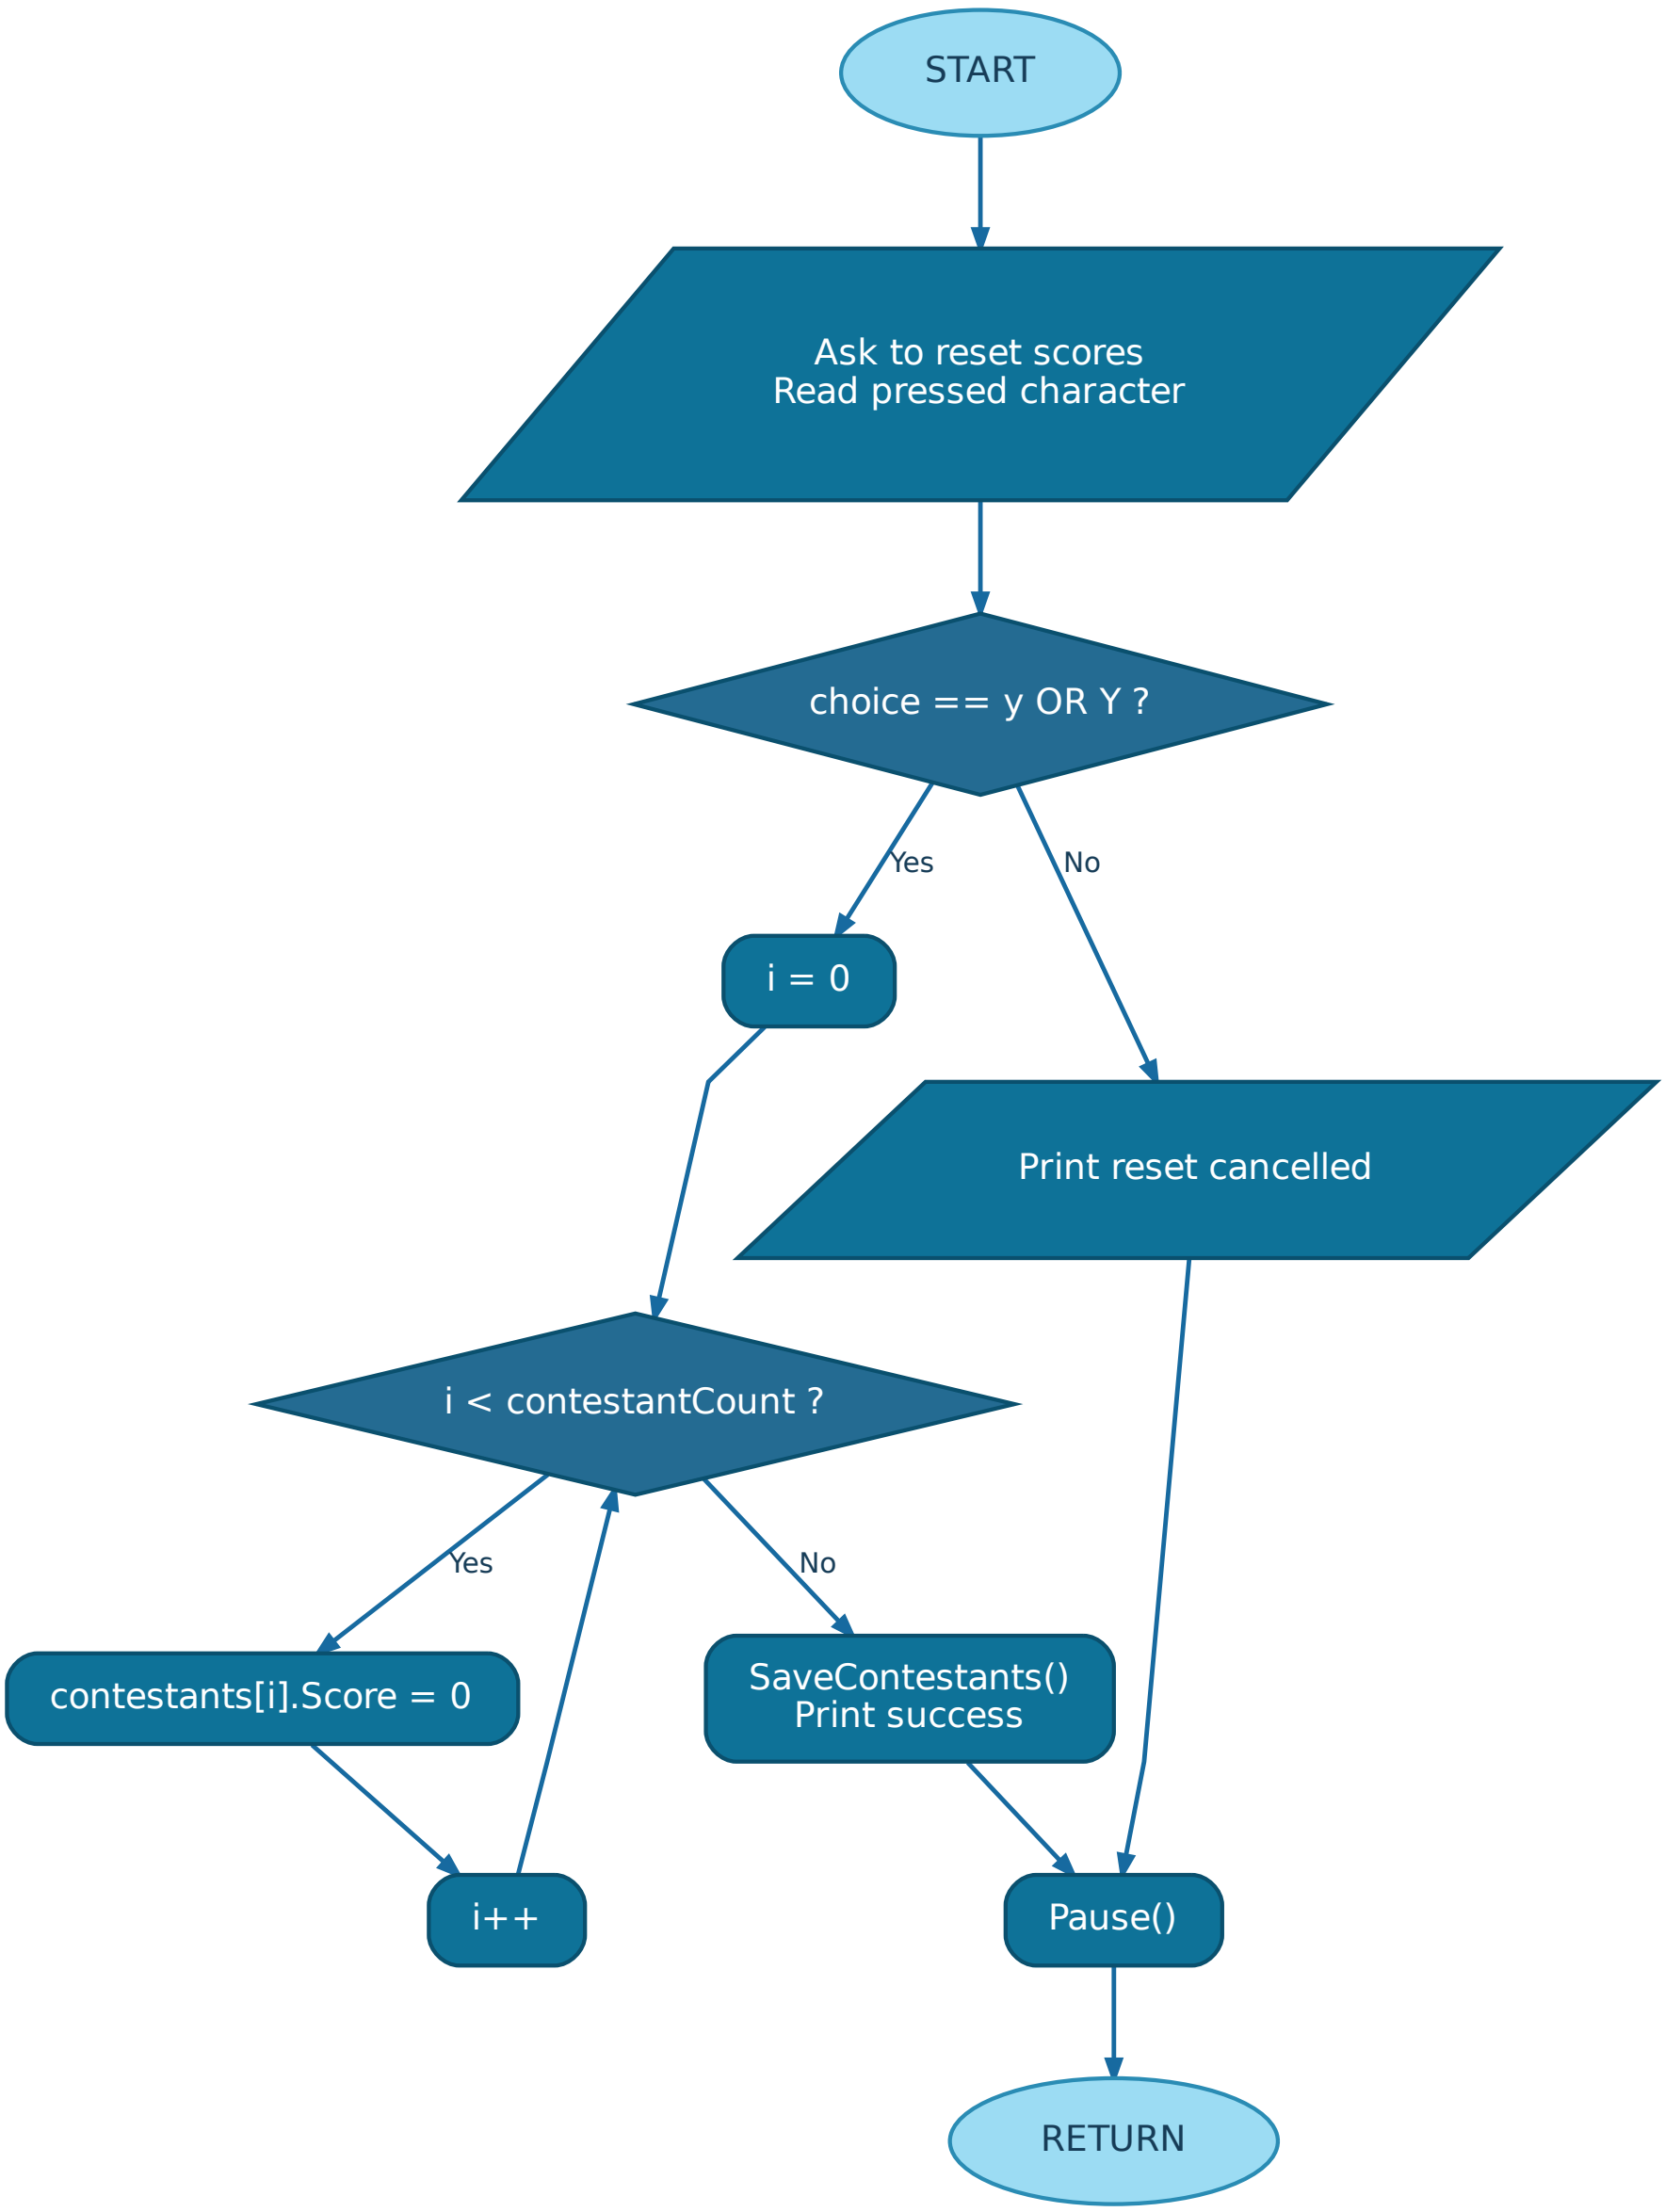

TopFive()

Create an index array, bubble-sort the indexes by score, display five

ResetScores()

Confirm reset, set every score to 0, save changed file

Pause()

Wait for Enter before continuing
